Polish producer of the wooden composite terrace boards, fences and elevations is looking for distributors.	Polish producer of the wooden composite terrace boards, fences and elevations wants to expand to new markets therefore they are looking for reliable partners for distribution activities.	BOPL20150216001	The company is a Polish producer of the wooden composite terrace boards, fences and elevations. They are interested in spreading their distribution in export. Their system includes: boards, joists, masking profiles and set installation.	The greatest advantage of composite decking system offered is the lack of need for maintenance and impregnation, which in the case of wood is expensive and laborious. For the production of boards they use only selected, high quality wood. By using wood fibers customer can enjoy the warmth and aesthetics characteristic for wooden planks. Surface brushing ensures a non-slip surface. Even wet, boards remain safe in use. Addition of biocides protects the wood fiber against biological degradation due to interference of fungi and pests. The boards contain calcium-zinc stabilizers - additives that are lead-free and do not expose the user to the adverse health effects caused by heavy metals. The decking system has the highest, obtainable by wood-plastic composites, flammability class (Bfl-s1). Due to high density

Polish rubber granulate producer (for racetracks, playgrounds and artificial grass) is looking for distributors	Polish SME from South-West of Poland a highly specialised manufacturer, is seeking for distributors in Central and Eastern Europe, offering rubber granulate (at various sizes) to be used for creation of recreation areas i.e. racetrack, playgrounds, tennis courts and paddocks.	BOPL20141009002	Polish SME from South-West of Poland a highly specialised manufacturer of rubber granulate - made of rubber waste or discarded products is looking for potential distributors among Central and Eastern European countries. The product, rubber granulate (at various sizes/fractions) can be used for creation of various recreation areas such as: racetracks, playgrounds or tennis courts and paddocks. The rubber granulate is always the top layer (solid) or might be used as a powder to support artificial grass. (Please see the attached files).	The production process of rubber granulate is highly specialised, require large amounts of energy and it's time consuming but its application allows to recover the rubber. Hence the company has significant know-how regarding the rubber waste reclamation.

Investor in frame of joint venture needed in the sector of environmental chemistry / recycling	A Polish company from Lower Silesia active in processing of polyolefin is looking for a partner for joint venture, involving processing of plastic waste (non-metallizing and metallizing). Polish SME has long-term experience in mentioned area, is the owner of patents covering the full process offered to future collaborator. Expected form of cooperation: establishing of a new company, with contribution of intellectual property owned by the Polish partner.	BOPL20130716002	A Polish company from Lower Silesia active in processing of polyolefin is looking for a partner for joint venture, involving processing of plastic waste (non-metallizing and metallizing). The company is looking for a partner who will financially contribute in construction of a new plant, based on own patents and know-how. The company owns 3 patents: <ul style="list-style-type: none"> - Technology for catalytic cracking of polyolefin (plastic) waste, - Technology for waste processing (metalized polyolefin film), - Efficient technology for eco-fuel production, which together gives complementary technology line, available as different technology offers. The Company also has a lease agreement for the property in direction of industrial use, (area 1.53 ha) with the right location for conducting chemical production. Local authorities issued proper decisions to allow such an activity. The property contains a hall with an area of 300 sq. m. and has all the necessary media to carry out the production.	Authors solutions proven by patents and secret know-how related to the recovery of materials, results with obtaining useful (and precious) materials, opposed to currently used and popular practices of incineration and landfill disposing. ie.products of this process might concern polymer waxes, which demand for (globaly) is approximately 4.4 million tonnes per annum, with projected growth rate of 2% per year during 2013 - 2020 according to experts, In parallel with the process of recovery of the polymer fraction, the company has also experience in recovery of metals used in the sputtering process. Worth emphasising is that recovery of (precious) metals used in the sputtering process is so far, not used and is a secret know-how of the offering company.	This technology concerns the processing of plastic waste (non-metallizing and metallizing) along with extraction of precious metals and elements used during the production of various plastic components. Technology requires specific installation and secret know-how and international patents which are owned by the offering SME
