INTRODUCTION

Doing Business sheds light on how easy or difficult it is for a local entrepreneur to open and run a small to medium-size business when complying with relevant regulations. It measures and tracks changes in regulations affecting 11 areas in the life cycle of a business: starting a business, dealing with construction permits, getting electricity, registering property, getting credit, protecting minority investors, paying taxes, trading across borders, enforcing contracts, resolving insolvency and labor market regulation.

In a series of annual reports *Doing Business* presents quantitative indicators on business regulations and the protection of property rights that can be compared across 189 economies, from Afghanistan to Zimbabwe, over time. The data set covers 47 economies in Sub-Saharan Africa, 32 in Latin America and the Caribbean, 25 in East Asia and the Pacific, 26 in Eastern Europe and Central Asia, 20 in the Middle East and North Africa and 8 in South Asia, as well as 31 OECD high-income economies. The indicators are used to analyze economic outcomes and identify what reforms have worked, where and why.

This economy profile presents the *Doing Business* indicators for Zimbabwe. To allow useful comparison, it also provides data for other selected economies (comparator economies) for each indicator. The data in this report are current as of June

1, 2014 (except for the paying taxes indicators, which cover the period January–December 2013).

The *Doing Business* methodology has limitations. Other areas important to business—such as an economy's proximity to large markets, the quality of its infrastructure services (other than those related to trading across borders and getting electricity), the security of property from theft and looting, the transparency of government procurement, macroeconomic conditions or the underlying strength of institutions—are not directly studied by *Doing Business*. The indicators refer to a specific type of business, generally a local limited liability company operating in the largest business city. Because standard assumptions are used in the data collection, comparisons and benchmarks are valid across economies. The data not only highlight the extent of obstacles to doing business; they also help identify the source of those obstacles, supporting policy makers in designing regulatory reform.

More information is available in the full report. *Doing Business 2015* presents the indicators, analyzes their relationship with economic outcomes and presents business regulatory reforms. The data, along with information on ordering *Doing Business 2015*, are available on the *Doing Business* website at <http://www.doingbusiness.org>.

CHANGES IN *DOING BUSINESS 2015*

As part of a 2-year update in methodology, *Doing Business 2015* incorporates 7 important changes. First, the ease of doing business ranking as well as all topic-level rankings are now computed on the basis of distance to frontier scores (see the chapter on the distance to frontier and ease of doing business ranking). Second, for the 11 economies with a population of more than 100 million, data for a second city have been added to the data set and the ranking calculation. These economies are Bangladesh, Brazil, China, India, Indonesia, Japan, Mexico, Nigeria, Pakistan, the Russian Federation and the United States. Third, for getting credit, the methodology has been revised for both the strength of legal rights index and the depth of credit information index. The number of points has been increased in both indices, from 10 to 12 for the strength of legal rights index and from 6 to 8 for the depth of credit information index. In addition, only credit bureaus and registries that cover at least 5% of the adult population can receive a score on the depth of credit information index.

Fourth, the name of the protecting investors indicator set has been changed to protecting minority investors to better reflect its scope—and the scope of the indicator set has been expanded to include shareholders' rights in corporate governance beyond related-party transactions. Fifth, the resolving insolvency indicator set has been expanded to include an index measuring the strength of the legal framework for insolvency. Sixth, the calculation of the distance to frontier score for paying taxes has been changed. The total tax rate component now enters the score in a nonlinear fashion, in an approach different from that used for all other indicators (see the chapter on the distance to frontier and ease of doing business ranking).

Finally, the name of the employing workers indicator set has been changed to labor market regulation, and the scope of this indicator set has also been changed. The indicators now focus on labor market regulation applying to the retail sector rather than the manufacturing sector, and their coverage has been expanded to include regulations on labor disputes and on benefits provided to workers. The labor market regulation indicators continue to be excluded from the aggregate distance to frontier score and ranking on the ease of doing business.

Beyond these changes there are 3 other updates in methodology. For paying taxes, the financial statement variables have been updated to be proportional to 2012 income per capita; previously they were proportional to 2005 income per capita. For enforcing contracts, the value of the claim is now set at twice the income per capita or \$5,000, whichever is greater. For dealing with construction permits, the cost of construction is now set at 50 times income per capita (before, the cost was assessed by the *Doing Business* respondents). In addition, this indicator set no longer includes the procedures for obtaining a landline telephone connection.

For more details on the changes, see the "What is changing in *Doing Business*?" chapter starting on page 24 of the *Doing Business 2015* report. For more details on the data and methodology, please see the "Data Notes" chapter starting on page 114 of the *Doing Business 2015* report. For more details on the distance to frontier metric, please see the "Distance to frontier and ease of doing business ranking" chapter in this profile.

THE BUSINESS ENVIRONMENT

For policy makers trying to improve their economy's regulatory environment for business, a good place to start is to find out how it compares with the regulatory environment in other economies. *Doing Business* provides an aggregate ranking on the ease of doing business based on indicator sets that measure and benchmark regulations applying to domestic small to medium-size businesses through their life cycle. Economies are ranked from 1 to 189 by the ease of doing business ranking. This year's report presents results for 2 aggregate measures: the distance to frontier score and the ease of doing business ranking. The ranking of economies is determined by sorting the aggregate distance to frontier (DTF) scores. The distance to frontier score benchmarks economies with respect to regulatory practice, showing the absolute distance to the best performance in each *Doing Business* indicator. An economy's distance to frontier score is indicated on a scale from 0 to 100, where 0 represents the worst performance and 100 the frontier. (See the chapter on the distance to frontier and ease of doing business). The 10 topics included in the ranking in *Doing Business 2015*: starting a business, dealing with construction permits, getting electricity, registering property, getting credit, protecting minority investors, paying taxes, trading across borders, enforcing contracts and resolving insolvency. The labor market regulation indicators (formerly employing workers) are not included in this year's aggregate ease of doing business ranking, but the data are presented in this year's economy profile.

The aggregate ranking on the ease of doing business benchmarks each economy's performance on the indicators against that of all other economies in the *Doing Business* sample (figure 1.1). While this ranking tells much about the business environment in an economy, it does not tell the whole story. The ranking on the ease of doing business, and the underlying indicators, do not measure all aspects of the business environment that matter to firms and investors or that affect the competitiveness of the economy. Still, a high ranking does mean that the government has created a regulatory environment conducive to operating a business.

ECONOMY OVERVIEW

Region: Sub-Saharan Africa

Income category: Low income

Population: 14,149,648

GNI per capita (US\$): 820

DB2015 rank: 171

DB2014 rank: 172*

Change in rank: 1

DB 2015 DTF: 47

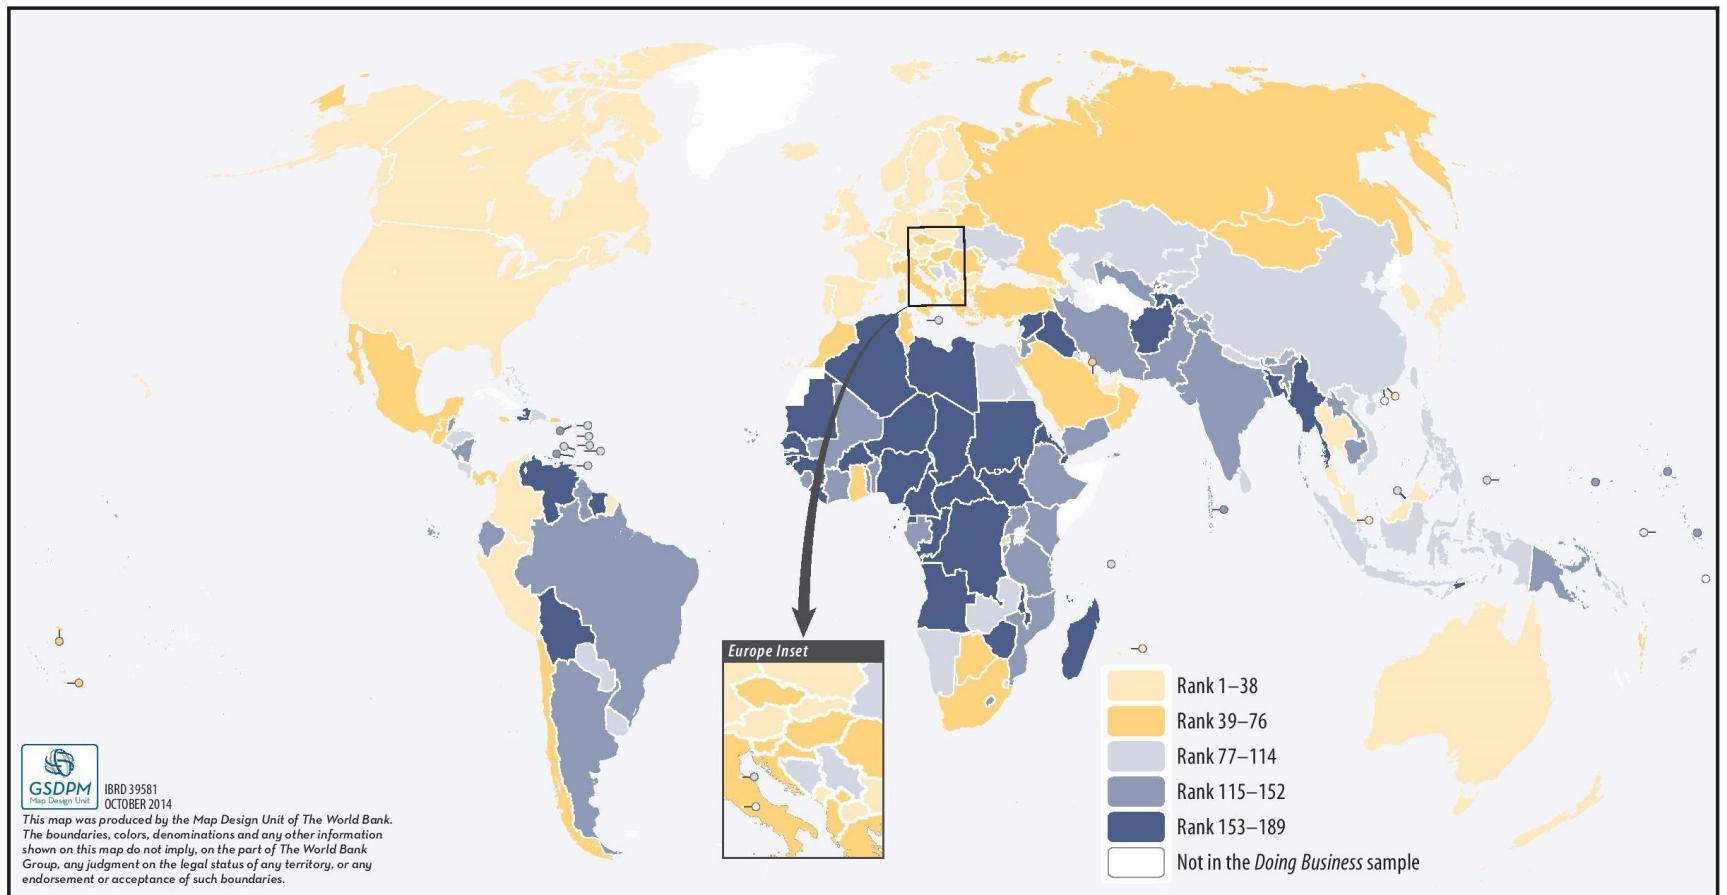

DB 2014 DTF: 45.4

Change in DTF: 1.6

* DB2014 ranking shown is not last year's published ranking but a comparable ranking for DB2014 that captures the effects of such factors as data corrections and the changes in methodology. See the data notes starting on page 114 of the *Doing Business 2015* report for sources and definitions.

THE BUSINESS ENVIRONMENT

Figure 1.1 Where economies stand in the global ranking on the ease of doing business

THE BUSINESS ENVIRONMENT

For policy makers, knowing where their economy stands in the aggregate ranking on the ease of doing business is useful. Also useful is to know how it ranks relative to comparator economies and relative to the

regional average (figure 1.2). The economy's rankings (figure 1.3) and distance to frontier scores (figure 1.4) on the topics included in the ease of doing business ranking provide another perspective.

Figure 1.2 How Zimbabwe and comparator economies rank on the ease of doing business

Note: The rankings are benchmarked to June 2014 and based on the average of each economy's distance to frontier (DTF) scores for the 10 topics included in this year's aggregate ranking. The distance to frontier score benchmarks economies with respect to regulatory practice, showing the absolute distance to the best performance in each *Doing Business* indicator. An economy's distance to frontier score is indicated on a scale from 0 to 100, where 0 represents the worst performance and 100 the frontier. For the economies for which the data cover 2 cities, scores are a population-weighted average for the 2 cities.

 (Scale: Rank 189 center, Rank 1 outer edge)

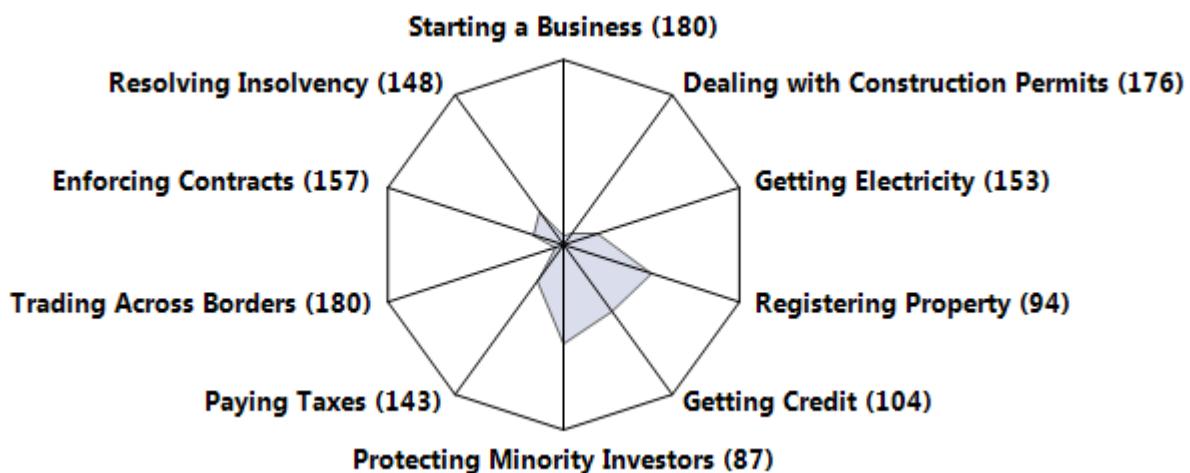

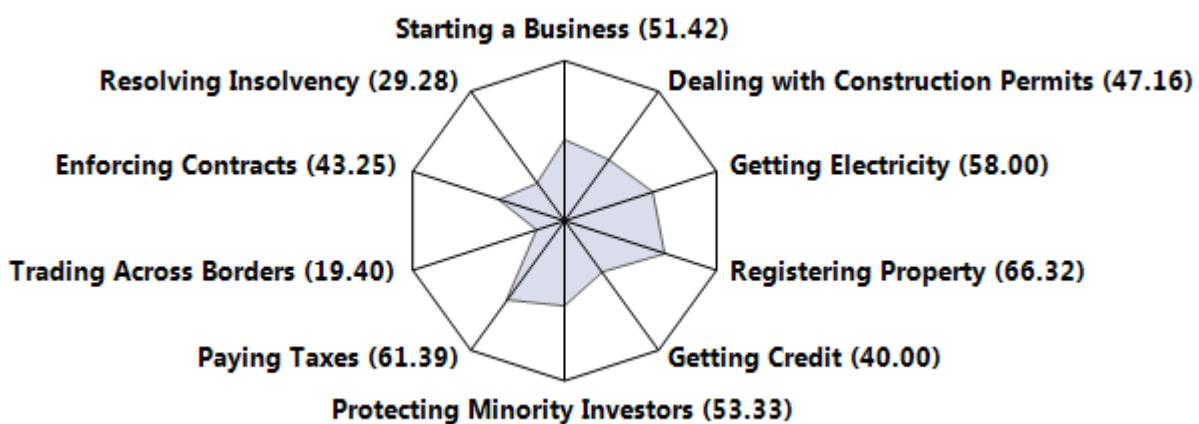

Figure 1.4 Distance to frontier scores on *Doing Business* topics - Zimbabwe
 (Scale: Score 0 center, Score 100 outer edge)

Note: The rankings are benchmarked to June 2014 and based on the average of each economy's distance to frontier (DTF) scores for the 10 topics included in this year's aggregate ranking. The distance to frontier score benchmarks economies with respect to regulatory practice, showing the absolute distance to the best performance in each *Doing Business* indicator. An economy's distance to frontier score is indicated on a scale from 0 to 100, where 0 represents the worst performance and 100 the frontier. For the economies for which the data cover 2 cities, scores are a population-weighted average for the 2 cities.

Source: *Doing Business* database.

THE BUSINESS ENVIRONMENT

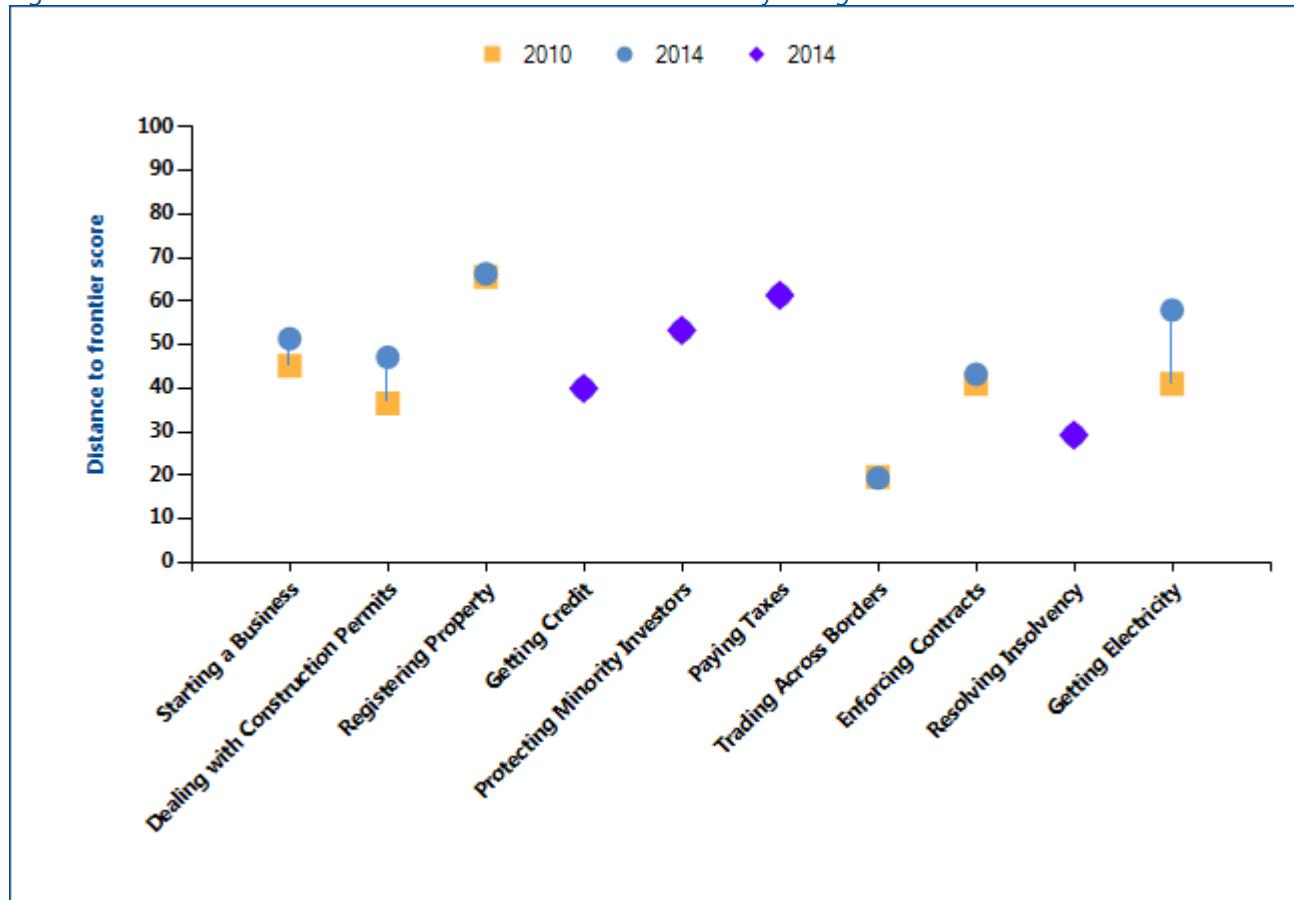

Just as the overall ranking on the ease of doing business tells only part of the story, so do changes in that ranking. Yearly movements in rankings can provide some indication of changes in an economy's regulatory environment for firms, but they are always relative.

Moreover, year-to-year changes in the overall rankings do not reflect how the business regulatory environment in an economy has changed over time—or how it has changed in different areas. To aid in assessing such changes,

Doing Business introduced the distance to frontier score. This measure shows how far on average an economy is from the best performance achieved by any economy on each *Doing Business* indicator.

Comparing the measure for an economy at 2 points in time allows users to assess how much the economy's regulatory environment as measured by *Doing Business* has changed over time—how far it has moved toward (or away from) the most efficient practices and strongest regulations in areas covered by *Doing Business* (figure 1.5).

Figure 1.5 How far has Zimbabwe come in the areas measured by *Doing Business*?

Note: The distance to frontier score shows how far on average an economy is from the best performance achieved by any economy on each *Doing Business* indicator since 2010, except for getting credit, paying taxes, protecting minority investors and resolving insolvency which had methodology changes in 2014 and thus are only comparable to 2013. The measure is normalized to range between 0 and 100, with 100 representing the best performance (the frontier). See the data notes starting on page 114 of the *Doing Business 2015* report for more details on the distance to frontier score.

THE BUSINESS ENVIRONMENT

The absolute values of the indicators tell another part of the story (table 1.1). The indicators, on their own or in comparison with the indicators of a good practice economy or those of comparator economies in the region, may reveal bottlenecks reflected in large numbers of procedures, long delays or high costs. Or they may reveal unexpected strengths in an area of business

regulation—such as a regulatory process that can be completed with a small number of procedures in a few days and at a low cost. Comparison of the economy's indicators today with those in the previous year may show where substantial bottlenecks persist—and where they are diminishing.

Indicator	Zimbabwe DB2015	Zimbabwe DB2014	Angola DB2015	Botswana DB2015	Lesotho DB2015	Namibia DB2015	South Africa DB2015	Swaziland DB2015	Best performer globally DB2015
Time (years)	3.3		no practice	1.7	2.6	2.5	2.0	2.0	Ireland (0.4)
Cost (% of estate)	22.0	22.0	no practice	18.0	20.0	14.5	18.0	14.5	Norway (1.0)
Outcome (0 as piecemeal sale and 1 as going concern)	0	0	no practice	1	0	0	0	0	
Recovery rate (cents on the dollar)	13.8	13.1	0.0	62.7	29.0	35.2	35.7	38.7	Japan (92.9)
Strength of insolvency framework index (0-16)	7.0	7.0	no practice	7.5	7.0	8.5	14.5	8.0	5 Economies (15.0)*

Note: DB2014 rankings shown are not last year's published rankings but comparable rankings for DB2014 that capture the effects of such factors as data corrections and changes to the methodology. Trading across borders deflated and non-deflated values are identical in DB2015 because it is defined as the base year for the deflator. The best performer on time for paying taxes is defined as the lowest time recorded among all economies in the DB2015 sample that levy the 3 major taxes: profit tax, labor taxes and mandatory contributions, and VAT or sales tax. If an economy has no laws or regulations covering a specific area—for example, insolvency—it receives a "no practice" mark. Similarly, an economy receives a "no practice" or "not possible" mark if regulation exists but is never used in practice or if a competing regulation prohibits such practice. Either way, a "no practice" mark puts the economy at the bottom of the ranking on the relevant indicator.

* Two or more economies share the top ranking on this indicator. A number shown in place of an economy's name indicates the number of economies that share the top ranking on the indicator. For a list of these economies, see the *Doing Business* website (<http://www.doingbusiness.org>).

Source: *Doing Business* database.

STARTING A BUSINESS

Formal registration of companies has many immediate benefits for the companies and for business owners and employees. Legal entities can outlive their founders. Resources are pooled as several shareholders join forces to start a company. Formally registered companies have access to services and institutions from courts to banks as well as to new markets. And their employees can benefit from protections provided by the law. An additional benefit comes with limited liability companies. These limit the financial liability of company owners to their investments, so personal assets of the owners are not put at risk. Where governments make registration easy, more entrepreneurs start businesses in the formal sector, creating more good jobs and generating more revenue for the government.

What do the indicators cover?

Doing Business measures the ease of starting a business in an economy by recording all procedures officially required or commonly done in practice by an entrepreneur to start up and formally operate an industrial or commercial business—as well as the time and cost required to complete these procedures. It also records the paid-in minimum capital that companies must deposit before registration (or within 3 months). The ranking of economies on the ease of starting a business is determined by sorting their distance to frontier scores for starting a business. These scores are the simple average of the distance to frontier scores for each of the component indicators.

To make the data comparable across economies, *Doing Business* uses several assumptions about the business and the procedures. It assumes that all information is readily available to the entrepreneur and that there has been no prior contact with officials. It also assumes that the entrepreneur will pay no bribes. And it assumes that the business:

- Is a limited liability company, located in the largest business city and is 100% domestically owned¹.
- Has between 10 and 50 employees.
- Conducts general commercial or industrial activities.
- Has a start-up capital of 10 times income per capita.
- Has a turnover of at least 100 times income per capita.
- Does not qualify for any special benefits.
- Does not own real estate.

WHAT THE STARTING A BUSINESS INDICATORS MEASURE

Procedures to legally start and operate a company (number)

Preregistration (for example, name verification or reservation, notarization)

Registration in the economy's largest business city¹

Postregistration (for example, social security registration, company seal)

Time required to complete each procedure (calendar days)

Does not include time spent gathering information

Each procedure starts on a separate day (2 procedures cannot start on the same day). Procedures that can be fully completed online are recorded as ½ day.

Procedure completed once final document is received

No prior contact with officials

Cost required to complete each procedure (% of income per capita)

Official costs only, no bribes

No professional fees unless services required by law

Paid-in minimum capital (% of income per capita)

Deposited in a bank or with a notary before registration (or within 3 months)

¹ For the 11 economies with a population of more than 100 million, data for a second city have been added.

STARTING A BUSINESS

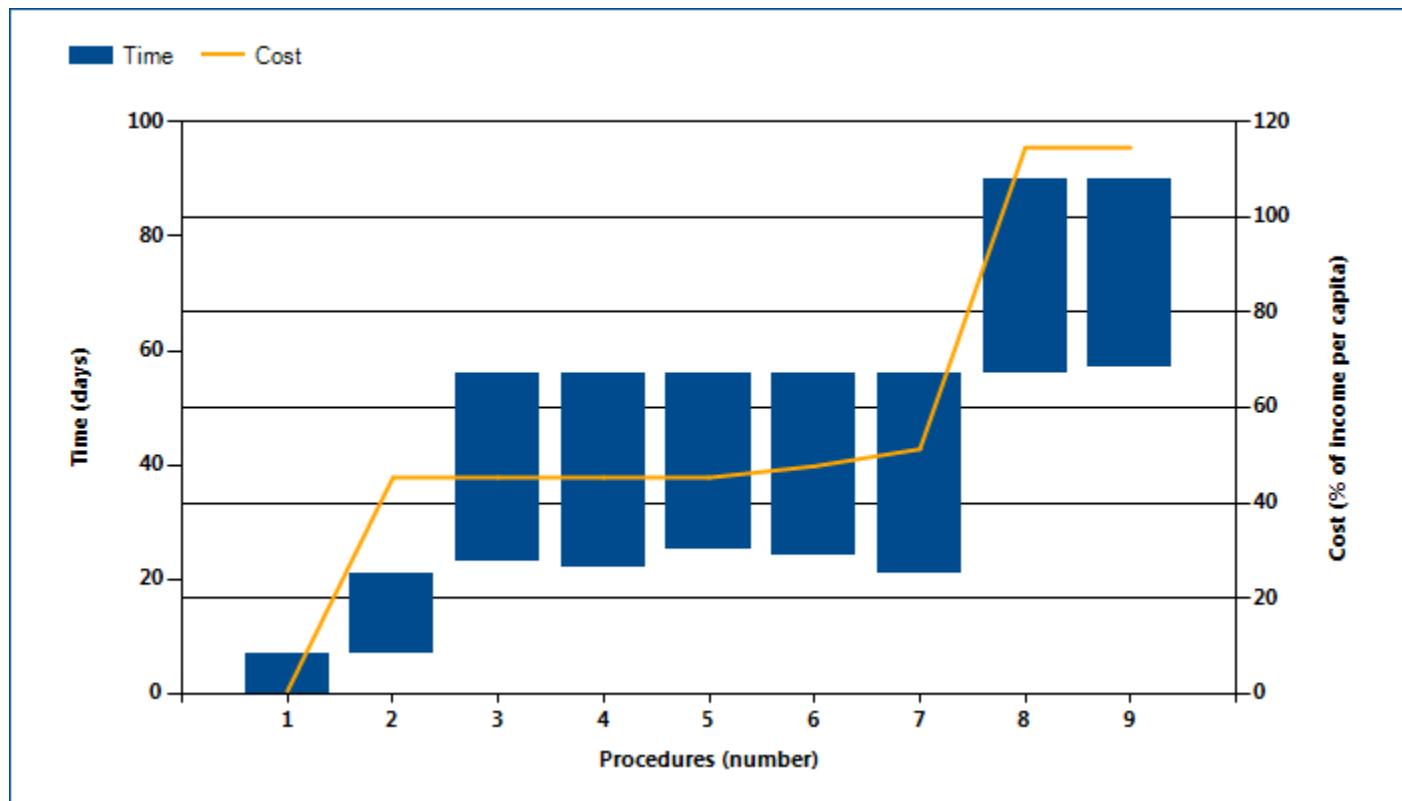

Where does the economy stand today?

What does it take to start a business in Zimbabwe? According to data collected by *Doing Business*, starting a business there requires 9.0 procedures, takes 90.0 days, costs 114.6% of income per capita and requires paid-in minimum capital of 0.0% of income per capita (figure 2.1). Most indicator sets refer to a case scenario in the

largest business city of an economy, except for 11 economies for which the data are a population-weighted average of the 2 largest business cities. See the chapter on distance to frontier and ease of doing business ranking at the end of this profile for more details.

Figure 2.1 What it takes to start a business in Zimbabwe -

Paid-in minimum capital (% of income per capita): 0.0

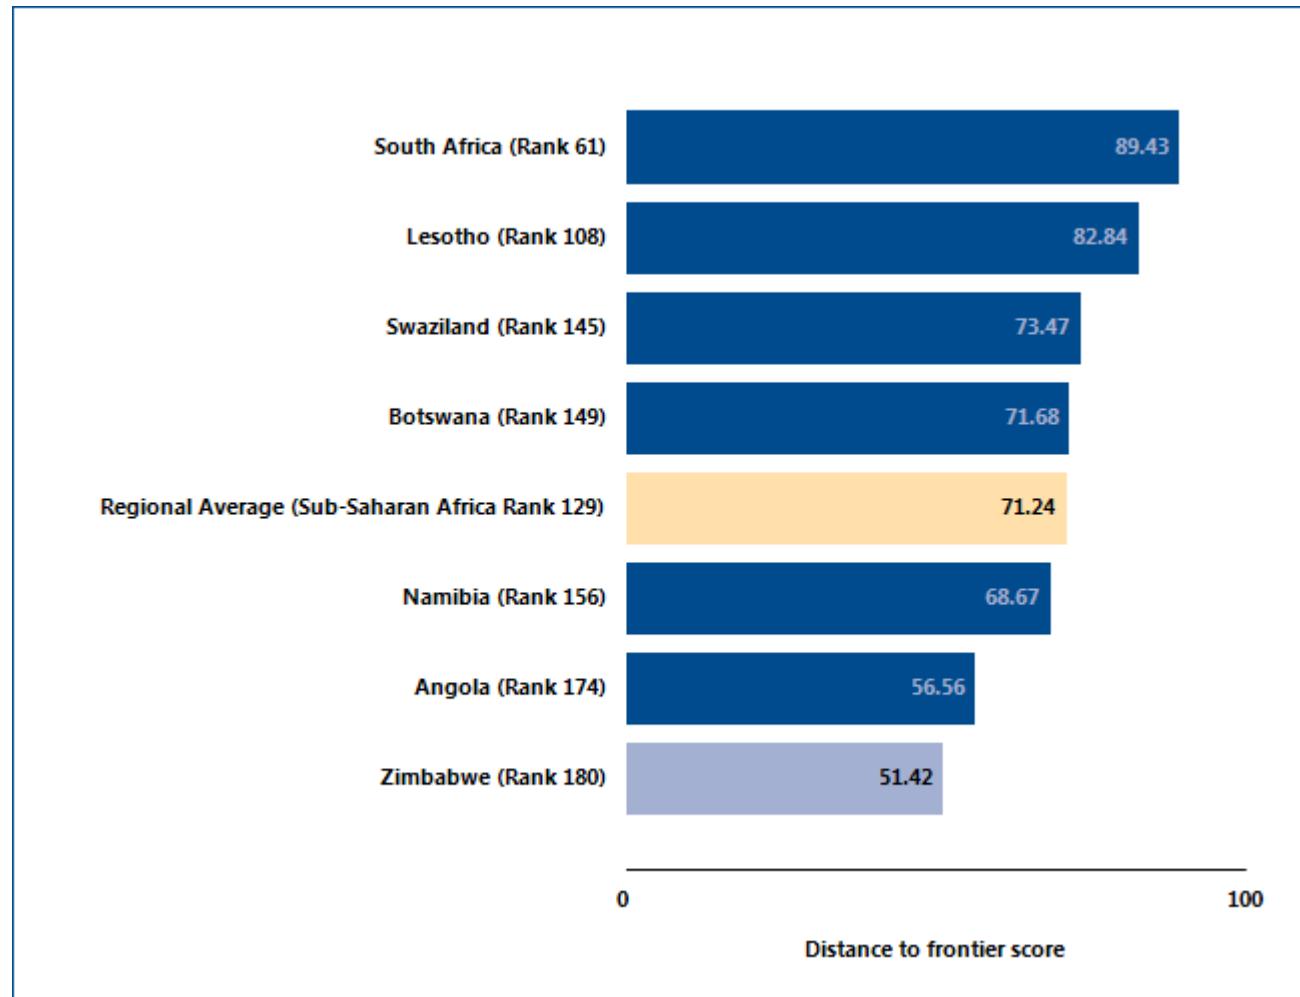

Note: Time shown in the figure above may not reflect simultaneity of procedures. Online procedures account for 0.5 days in the total time calculation. For more information on the methodology of the starting a business indicators, see the *Doing Business* website (<http://www.doingbusiness.org>). For details on the procedures reflected here, see the summary at the end of this chapter.

STARTING A BUSINESS

Globally, Zimbabwe stands at 180 in the ranking of 189 economies on the ease of starting a business (figure 2.2). The rankings for comparator economies and the regional

average ranking provide other useful information for assessing how easy it is for an entrepreneur in Zimbabwe to start a business.

Figure 2.2 How Zimbabwe and comparator economies rank on the ease of starting a business

Source: Doing Business database.

STARTING A BUSINESS

Economies around the world have taken steps making it easier to start a business—streamlining procedures by setting up a one-stop shop, making procedures simpler or faster by introducing technology and reducing or eliminating minimum capital requirements. Many have undertaken business registration reforms in stages—and

they often are part of a larger regulatory reform program. Among the benefits have been greater firm satisfaction and savings and more registered businesses, financial resources and job opportunities.

What business registration reforms has *Doing Business* recorded in Zimbabwe (table 2.1)?

Table 2.1 How has Zimbabwe made starting a business easier—or not?

By *Doing Business* report year from DB2010 to DB2015

DB year	Reform
DB2011	Zimbabwe eased business start-up by reducing registration fees and speeding up the name search process and company and tax registration.

Note: For information on reforms in earlier years (back to DB2005), see the *Doing Business* reports for these years, available at <http://www.doingbusiness.org>.

Source: *Doing Business* database.

STARTING A BUSINESS

What are the details?

Underlying the indicators shown in this chapter for Zimbabwe is a set of specific procedures—the bureaucratic and legal steps that an entrepreneur must complete to incorporate and register a new firm. These are identified by *Doing Business* through collaboration with relevant local professionals and the study of laws, regulations and publicly available information on business entry in that economy. Following is a detailed summary of those procedures, along with the associated time and cost. These procedures are those that apply to a company matching the standard assumptions (the “standardized company”) used by *Doing Business* in collecting the data (see the section in this chapter on what the indicators measure).

STANDARDIZED COMPANY

Legal form: Private Limited Liability Company

Paid in minimum capital requirement: USD 0

City: Harare

Start-up Capital: 10 times GNI per capita

Table 2.2 Summary of time, cost and procedures for starting a business in Zimbabwe -

No.	Procedure	Time to complete	Cost to complete
1	<p>Reserve the company name with the Chief Registrar of Companies</p> <p>The reservation is valid for 30 days and can be extended for another 30 days for an additional fee.</p> <p><i>Agency: Chief Registrar of Companies</i></p>	7 days	USD 5
2	<p>File the memorandum and articles of association with the Registrar of Companies</p> <p>The law provides for model or boilerplate articles of incorporation. On the date of incorporation, the Registrar of Companies must be notified of the appointments of the company's directors and secretaries. This is done by filing the particulars of the directors and secretaries and any changes therein or a list of directors and principal officers (Form CR 14). These documents must be accompanied by a duplicate original or a printed notarized copy.</p> <p>Registration Fee is US\$ 5 for every US\$ 100 or part thereof of the nominal/authorized capital of the company with a minimum fee of US\$ 100.</p> <p>In practice, companies usually start up with a low amount of capital to avoid the exorbitant stamp duty. A company may also issue shares at a premium to circumvent the requirement.</p> <p><i>Agency: Registrar of Companies</i></p>	14 days	see comments

No.	Procedure	Time to complete	Cost to complete
3	<p>Register with the tax authorities for income tax, VAT, and PAYE</p> <p>Upon formation, a company must register at the regional Zimbabwe Revenue Authority Office. A copy of the company's certificate of incorporation is required for the Collector's records, along with the memorandum and articles of association and a certified copy of the identification of the assigned public officer. The company will be issued a registration number, as well as the current tax tables and the pay-as-you-earn (PAYE) receipt books. The P8 and P6 Forms now must be generated by the applicant and are not freely available. The ITF 16 Form must be completed in consultation with the Income Tax Office. According to Zimbabwe's Finance Act (as amended), companies must now budget to pay all their company tax within the trading year. The tax must be paid as follows: 10% by the 25th of March, 10% by the 25th of June, 40% by the 25th of September, and the balance of the estimated tax for the tax year by the 20th of December.</p> <p>Firms with a turnover of US \$60,000 must register for VAT with the Zimbabwe Revenue Authority (ZIMRA). An application must be submitted for a Certificate of Registration (Form VAT 1), which, along with Forms VAT 2 and VAT 3, is found at ZIMRA Web site (www.zimra.co.zw). Firms with a turnover of less than US \$60,000 may apply for voluntary VAT registration.</p> <p><i>Agency: Tax authorities</i></p>	14 days	no charge
4	<p>* Register with the National Social Security Authority for pension and Accident Prevention and Compensation Scheme</p> <p>The employer and the employee must each contribute 3% of employee the gross monthly salary.</p> <p><i>Agency: National Social Security Authority</i></p>	14 days (simultaneous with procedure 3)	no charge
5	<p>* Register with the Manpower Development Fund</p> <p>Employers must register with, and contribute 1% of their wage bill to, the state-run Manpower Development Fund. The fund allows employers to recover expenses when employees complete training.</p> <p><i>Agency: Manpower Development Fund</i></p>	1 day (simultaneous with procedure 3)	no charge
6	<p>* Pick up the form of license application notice from the City Health Department</p> <p>The entrepreneur then retrieves the license application notice form from the City Health Department.</p> <p><i>Agency: City Health Department</i></p>	1 day, simultaneous with procedure 3	USD 20

No.	Procedure	Time to complete	Cost to complete
7	<p>* Advertise the application for a trade and business license in a local newspaper</p> <p>A trade and business license applicant must publicly announce the proposed application twice in a local newspaper. The form, Notice of intention to apply for the issuance of a new license, is available from the City Health Department. The first notice must be published no more than 6 weeks, but at least 4 weeks, before the application will be heard by the licensing authority. The second notice must appear 7 days after the first notice. Any objections to the application must be submitted in writing to the licensing authority within 7 days of the second notice.</p> <p><i>Agency: Newspaper</i></p>	34 days on average, simultaneous with procedure 3	USD 30
8	<p>Submit an application form for the issuance of new licenses to the Licensing Office in Harare Municipality</p> <p>Two copies of the application forms are submitted along with proof of both publications in a local newspaper of a notice of intention to operate a business. On receipt of the application, the Licensing Office requests a police report from the applicant, as well as a similar report from the person who will be in actual and effective control of the premises to which the application relates, if that person is not the same applicant. The Licensing Office also seeks a report from the Harare Town Planner to ensure that the application is consistent with the zoned use of the premises.</p> <p>Application for the license can start once the Registrar of Companies grants its approval of the company name. It is also possible to apply for a temporary license pending the grant of the full license, which can take up to a month or longer.</p> <p><i>Agency: Licensing Office in Harare Municipality</i></p>	34 days	UDS 530
9	<p>* Receive inspection by the Licensing officers</p> <p>Officers inspect the company site to check if the workplace premises are suitable for the intended use. The verification criteria used by the officers are specified in the relevant bylaws.</p> <p><i>Agency: Licensing Office in Harare Municipality</i></p>	1 day, simultaneous with previous procedure	no charge

* Takes place simultaneously with another procedure.

Note: Online procedures account for 0.5 days in the total time calculation.

Source: Doing Business database.

DEALING WITH CONSTRUCTION PERMITS

Regulation of construction is critical to protect the public. But it needs to be efficient, to avoid excessive constraints on a sector that plays an important part in every economy. Where complying with building regulations is excessively costly in time and money, many builders opt out. They may pay bribes to pass inspections or simply build illegally, leading to hazardous construction that puts public safety at risk. Where compliance is simple, straightforward and inexpensive, everyone is better off.

What do the indicators cover?

Doing Business records the procedures, time and cost for a business in the construction industry to obtain all the necessary approvals to build a warehouse in the economy's largest business city, connect it to basic utilities and register the warehouse so that it can be used as collateral or transferred to another entity.

The ranking of economies on the ease of dealing with construction permits is determined by sorting their distance to frontier scores for dealing with construction permits. These scores are the simple average of the distance to frontier scores for each of the component indicators.

To make the data comparable across economies, *Doing Business* uses several assumptions about the business and the warehouse, including the utility connections.

The business:

- Is a limited liability company operating in the construction business and located in the largest business city. For the 11 economies with a population of more than 100 million, data for a second city have been added. Is domestically owned and operated.
- Has 60 builders and other employees.

The warehouse:

- Is valued at 50 times income per capita.
- Is a new construction (there was no previous construction on the land).

WHAT THE DEALING WITH CONSTRUCTION PERMITS INDICATORS MEASURE

Procedures to legally build a warehouse (number)

Submitting all relevant documents and obtaining all necessary clearances, licenses, permits and certificates

Submitting all required notifications and receiving all necessary inspections

Obtaining utility connections for water and sewerage

Registering the warehouse after its completion (if required for use as collateral or for transfer of the warehouse)

Time required to complete each procedure (calendar days)

Does not include time spent gathering information

Each procedure starts on a separate day. Procedures that can be fully completed online are recorded as ½ day.

Procedure considered completed once final document is received

No prior contact with officials

Cost required to complete each procedure (% of warehouse value)

Official costs only, no bribes

- Will have complete architectural and technical plans prepared by a licensed architect or engineer.
- Will be connected to water and sewerage (sewage system, septic tank or their equivalent). The connection to each utility network will be 150 meters (492 feet) long.
- Will be used for general storage, such as of books or stationery (not for goods requiring special conditions).
- Will take 30 weeks to construct (excluding all delays due to administrative and regulatory requirements).

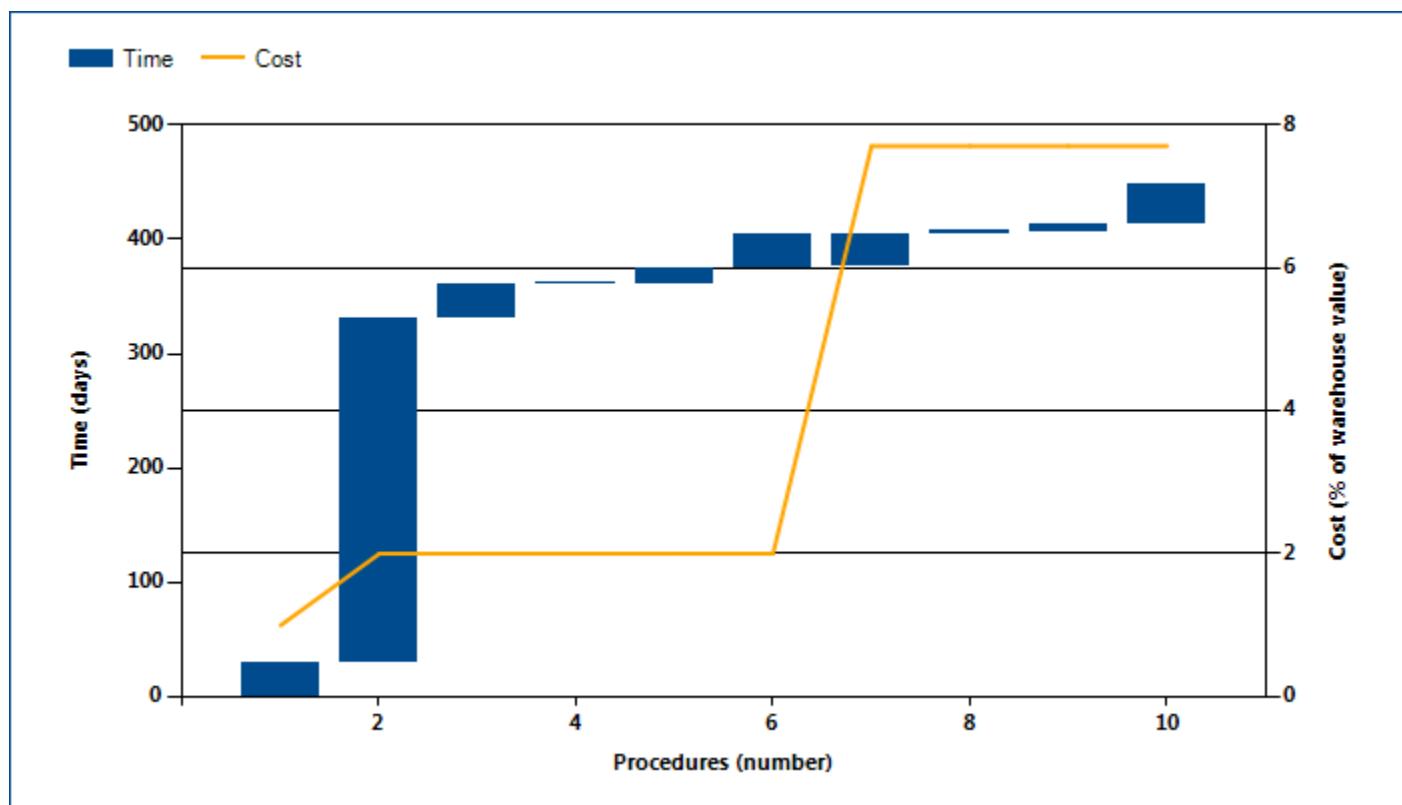

DEALING WITH CONSTRUCTION PERMITS

Where does the economy stand today?

What does it take to comply with the formalities to build a warehouse in Zimbabwe? According to data collected by *Doing Business*, dealing with construction permits there requires 10.0 procedures, takes 448.0 days and costs 7.7% of the warehouse value (figure 3.1). Most indicator sets refer to a case scenario in the largest

business city of an economy, except for 11 economies for which the data are a population-weighted average of the 2 largest business cities. See the chapter on distance to frontier and ease of doing business ranking at the end of this profile for more details.

Figure 3.1 What it takes to comply with formalities to build a warehouse in Zimbabwe -

Note: Time shown in the figure above may not reflect simultaneity of procedures. Online procedures account for 0.5 days in the total time calculation. For more information on the methodology of the dealing with construction permits indicators, see the *Doing Business* website (<http://www.doingbusiness.org>). For details on the procedures reflected here, see the summary at the end of this chapter.

DEALING WITH CONSTRUCTION PERMITS

Globally, Zimbabwe stands at 176 in the ranking of 189 economies on the ease of dealing with construction permits (figure 3.2). The rankings for comparator economies and the regional average ranking provide

other useful information for assessing how easy it is for an entrepreneur in Zimbabwe to legally build a warehouse.

Figure 3.2 How Zimbabwe and comparator economies rank on the ease of dealing with construction permits

Source: Doing Business database.

DEALING WITH CONSTRUCTION PERMITS

What are the details?

The indicators reported here for Zimbabwe are based on a set of specific procedures—the steps that a company must complete to legally build a warehouse—identified by *Doing Business* through information collected from experts in construction licensing, including architects, civil engineers, construction lawyers, construction firms, utility service providers and public officials who deal with building regulations. These procedures are those that apply to a company and structure matching the standard assumptions used by *Doing Business* in collecting the data (see the section in this chapter on what the indicators cover).

BUILDING A WAREHOUSE

Estimated cost of construction : **USD 41,884**

City : **Harare**

The procedures, along with the associated time and cost, are summarized below.

Table 3.2 Summary of time, cost and procedures for dealing with construction permits in Zimbabwe -

No.	Procedure	Time to complete	Cost to complete
1	<p>Request and obtain approval from the Inspector of Factories</p> <p>Before an application for approval of building plans can be submitted to the local authority, approval must first be obtained from the Inspector of Factories. This is a separate application and carries its own application fee, established by the Inspector. The approval period is not less than 30 days. The cost is 1% of the project value.</p> <p><i>Agency: Inspector of Factories</i></p>	30 days	USD 419
2	<p>Request and obtain building plan approval by the Harare City Council</p> <p>BuildCo must submit the following documents at the same time: the building permit application, the application for the factories inspection, the TPD-1 form for the planning permit (only if needed which is not the case for the Doing Business case study), and the architects' and structural engineers' drawings and certificates to the relevant local authority for approvals, under the Regional, Town, and Country Planning Act and the model building bylaws. The application must be accompanied by a completed set of plans for the structure, prepared by a qualified draftsman or architect.</p> <p>The application is circulated for approval to all departments, including the Department of Works, Highways and Works, Chemical Laboratory and Trade Waste, City Planning, Water and Sewerage, Land Survey, Traffic Engineering, Valuation and Estates, Department of Health, Department of Fire, Department of Housing and Community Services, and Zimbabwe Electricity Supply Authority (ZESA).</p> <p>Each agency contacts the applicant directly for clarification or rectification, if required. Once all agencies have accepted the plans, the Chief Building Inspector makes a final assessment and issues an approval of building plans to the applicant. The form contains a commencement of work notice that must be submitted by the</p>	300 days	USD 419

No.	Procedure	Time to complete	Cost to complete
	<p>applicant once the footings are ready for inspection. Subsequently, all phases of the construction must be approved by the Building Inspectorate.</p> <p>Procedural and approval costs are either 1% or 1.75% of the construction cost, but this varies from one authority to another. The time required for the entire procedure depends on the local authority; in Harare, it is usually not less than 6 months and can be up to a year.</p> <p>Because the approval cost is based on a percentage of the total construction cost, a certain amount is paid based on the estimated cost. However, the local authority may ask for the difference between the estimate and the actual cost at the end of the project (a common requirement). The cost of completion depends on whether the developer is prepared to fund the pre-purchase option. In addition, many developers close an insurance bond with the building contractor on the value of the construction materials.</p> <p>Should construction works commence prior to the approval of the building plans the local authority now imposes a "Regularisation Fee", or fine, of US\$5,000.</p> <p><i>Agency: Harare City Council</i></p>		
3	<p>Request and receive inspection from Building Inspectorate upon completion of foundation</p> <p>Delays frequently occur because the City of Harare inspectors cannot get transportation to inspect a site. Even if offered a lift to the site by the contractor or consultant, the inspectors are not allowed to accept it because they are not insured for travel provided by a third party.</p> <p>Theoretically, inspections are conducted once a month. A final inspection will occur only if specifically requested (but is required for obtaining the occupancy permit). Theoretically, the builder must stop construction until the inspection is conducted, but doing so is impractical. The City of Harare inspectors generally allow a structural engineer to cover the inspections of foundations. In practice, since 2007 due to lack of fuel and means of transportation, inspections are no longer conducted. Companies use their own engineers for inspections during construction.</p> <p><i>Agency: Building Inspectorate</i></p>	30 days	no charge
4	<p>Inform the Building Inspectorate of the completion of drainage installation</p> <p>The officially required inspection almost never happens unless the fuel is provided for transportation.</p> <p><i>Agency: Building Inspectorate</i></p>	1 day	no charge

No.	Procedure	Time to complete	Cost to complete
5	<p>Request and receive inspection from the Building Inspectorate upon completion of structure</p> <p>As of 2007, inspections are undertaken by the Chief Building Inspector and a deputy inspector. This change, implemented after allegations that the lower officers were requesting facilitation payments, has caused the time required for this inspection to increase.</p> <p><i>Agency: Building Inspectorate</i></p>	14 days	no charge
6	<p>Request and receive inspection by the Building Inspectorate upon completion of construction</p> <p>Inspectors will visit the site only if there is fuel for vehicles, or the applicant provides transportation. Once the inspection has taken place, a protocol is written, which generally takes 30 days.</p> <p><i>Agency: Building Inspectorate</i></p>	30 days	no charge
7	<p>* Request and obtain water and sewage connection from Zimbabwe National Water Authority (ZINWA)</p> <p>In 2007, municipal water supplies have been taken over by a new authority, the Zimbabwe National Water Authority (ZINWA). Obtaining a new connection now requires proof of ownership of the stand and account clearance on any other water billing and is undertaken by the developer (in this case BuildCo) or its agents.</p> <p>Separate applications are made by the construction company for water and sewerage connections. There may be an additional charge for this determined by the local authority.</p> <p>BuildCo completes and lodges an application for a "new water connection and supply" form, available at the Water and Sewerage Branch of ZINWA. In addition to the form, BuildCo must provide the following:</p> <ul style="list-style-type: none"> • A letter of commitment addressed to the Director of Works stating BuildCo's intention to proceed with a connection • A statement of the quality of water required, to determine the appropriate pipe size and meter needed <p>The branch will issue the applicant a T.W. number and notate the application form. A receipt for the application specifying the fees to be paid is issued. Fees come in two parts, a supply deposit and a connection fee, and would be USD 626.00.</p> <p>The applicant must take the notated application form and the receipt to the City Treasury Office, pay the required fees, and have the branch receipt machine-endorsed with the payment.</p> <p>The cost depends on the type of water supply required. The applicant must purchase the water meter; ZINWA are no longer able to supply water meters. Application, connection fee, and account deposit amount to USD 1,764.00 for a 25-millimeter connection. There is no charge for</p>	1 day	USD 2,390

No.	Procedure	Time to complete	Cost to complete
	<p>the application, but there is an upfront charge before the connection is made.</p> <p>The embossed receipt and the application form are returned to the branch, which requests that a job number be issued by the Costing Office. The branch then issues a Location Advice internally for the work to be undertaken. The applicant is required to complete an Installation of Water Service form indicating the site of the connection.</p> <p>Where fire hose reels on site are required (a requirement under the building bylaws for any industrial/warehouse building exceeding 400 sq. m. in floor area), a 2-inch (50mm) water meter is required.</p> <p><i>Agency: Zimbabwe National Water Authority (ZINWA)</i></p>		
8	<p>Request occupancy certificate</p> <p><i>Agency: Local Authority</i></p>	1 day	no charge
9	<p>Request and receive inspection from the local Fire Department on fire equipment installation for occupancy certificate</p> <p>Approval by the Fire Department is required to obtain an occupancy permit. Inspections are made by appointment only. At least one week's notice is required most of the time. The same issues as with other inspections apply (no transportation, long delay). Therefore, in practice, the architect or draftsman picks up the inspector and brings the inspector to the site. Otherwise, it might take weeks before the inspector visits the site.</p> <p><i>Agency: Fire Department and Building Inspectorate</i></p>	7 days	no charge
10	<p>Obtain occupancy certificate</p> <p>An occupancy certificate is issued by the local authority once the project is complete and inspected by the Fire Department and the Building Inspector.</p> <p><i>Agency: Local Authority</i></p>	35 days	no charge

* Takes place simultaneously with another procedure.

Note: Online procedures account for 0.5 days in the total time calculation.

Source: Doing Business database.

GETTING ELECTRICITY

Access to reliable and affordable electricity is vital for businesses. To counter weak electricity supply, many firms in developing economies have to rely on self-supply, often at a prohibitively high cost. Whether electricity is reliably available or not, the first step for a customer is always to gain access by obtaining a connection.

What do the indicators cover?

Doing Business records all procedures required for a local business to obtain a permanent electricity connection and supply for a standardized warehouse, as well as the time and cost to complete them. These procedures include applications and contracts with electricity utilities, clearances from other agencies and the external and final connection works. The ranking of economies on the ease of getting electricity is determined by sorting their distance to frontier scores for getting electricity. These scores are the simple average of the distance to frontier scores for each of the component indicators. To make the data comparable across economies, several assumptions are used.

The warehouse:

- Is owned by a local entrepreneur, located in the economy's largest business city, in an area where other warehouses are located. For the 11 economies with a population of more than 100 million, data for a second city have been added.
- Is not in a special economic zone where the connection would be eligible for subsidization or faster service.
- Is located in an area with no physical constraints (ie. property not near a railway).
- Is a new construction being connected to electricity for the first time.
- Is 2 stories, both above ground, with a total surface of about 1,300.6 square meters (14,000 square feet), is built on a plot of 929 square meters (10,000 square feet), is used for storage of refrigerated goods

The electricity connection:

- Is 150 meters long and is a 3-phase, 4-wire Y, 140-kilovolt-ampere (kVA) (subscribed capacity) connection.

WHAT THE GETTING ELECTRICITY INDICATORS MEASURE

Procedures to obtain an electricity connection (number)

- Submitting all relevant documents and obtaining all necessary clearances and permits
- Completing all required notifications and receiving all necessary inspections
- Obtaining external installation works and possibly purchasing material for these works
- Concluding any necessary supply contract and obtaining final supply

Time required to complete each procedure (calendar days)

- Is at least 1 calendar day
- Each procedure starts on a separate day
- Does not include time spent gathering information

Reflects the time spent in practice, with little follow-up and no prior contact with officials

Cost required to complete each procedure (% of income per capita)

- Official costs only, no bribes
- Excludes value added tax

- Is to either the low-voltage or the medium-voltage distribution network and either overhead or underground, whichever is more common in the area where the warehouse is located. Included only negligible length in the customer's private domain.
- Requires crossing of a 10-meter road but all the works are carried out in a public land, so there is no crossing into other people's private property.
- Involves installing one electricity meter. The monthly electricity consumption will be 26880 kilowatt hour (kWh). The internal electrical wiring has been completed.

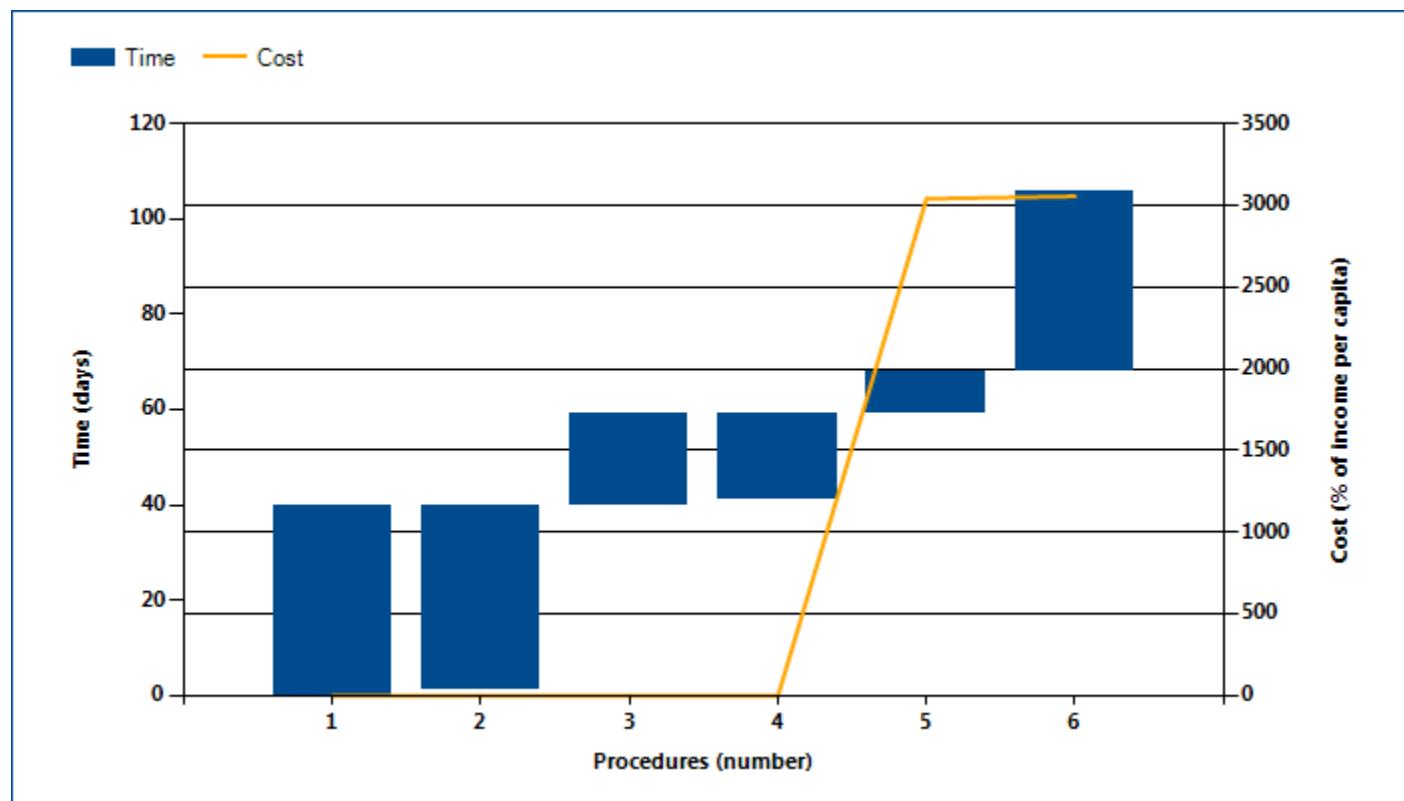

GETTING ELECTRICITY

Where does the economy stand today?

What does it take to obtain a new electricity connection in Zimbabwe? According to data collected by *Doing Business*, getting electricity there requires 6.0 procedures, takes 106.0 days and costs 3057.4% of income per capita (figure 4.1).

Most indicator sets refer to a case scenario in the largest business city of an economy, except for 11 economies for which the data are a population-weighted average of the 2 largest business cities. See the chapter on distance to frontier and ease of doing business ranking at the end of this profile for more details.

Figure 4.1 What it takes to obtain an electricity connection in Zimbabwe -

Note: Time shown in the figure above may not reflect simultaneity of procedures. For more information on the methodology of the getting electricity indicators, see the *Doing Business* website (<http://www.doingbusiness.org>). For details on the procedures reflected here, see the summary at the end of this chapter.

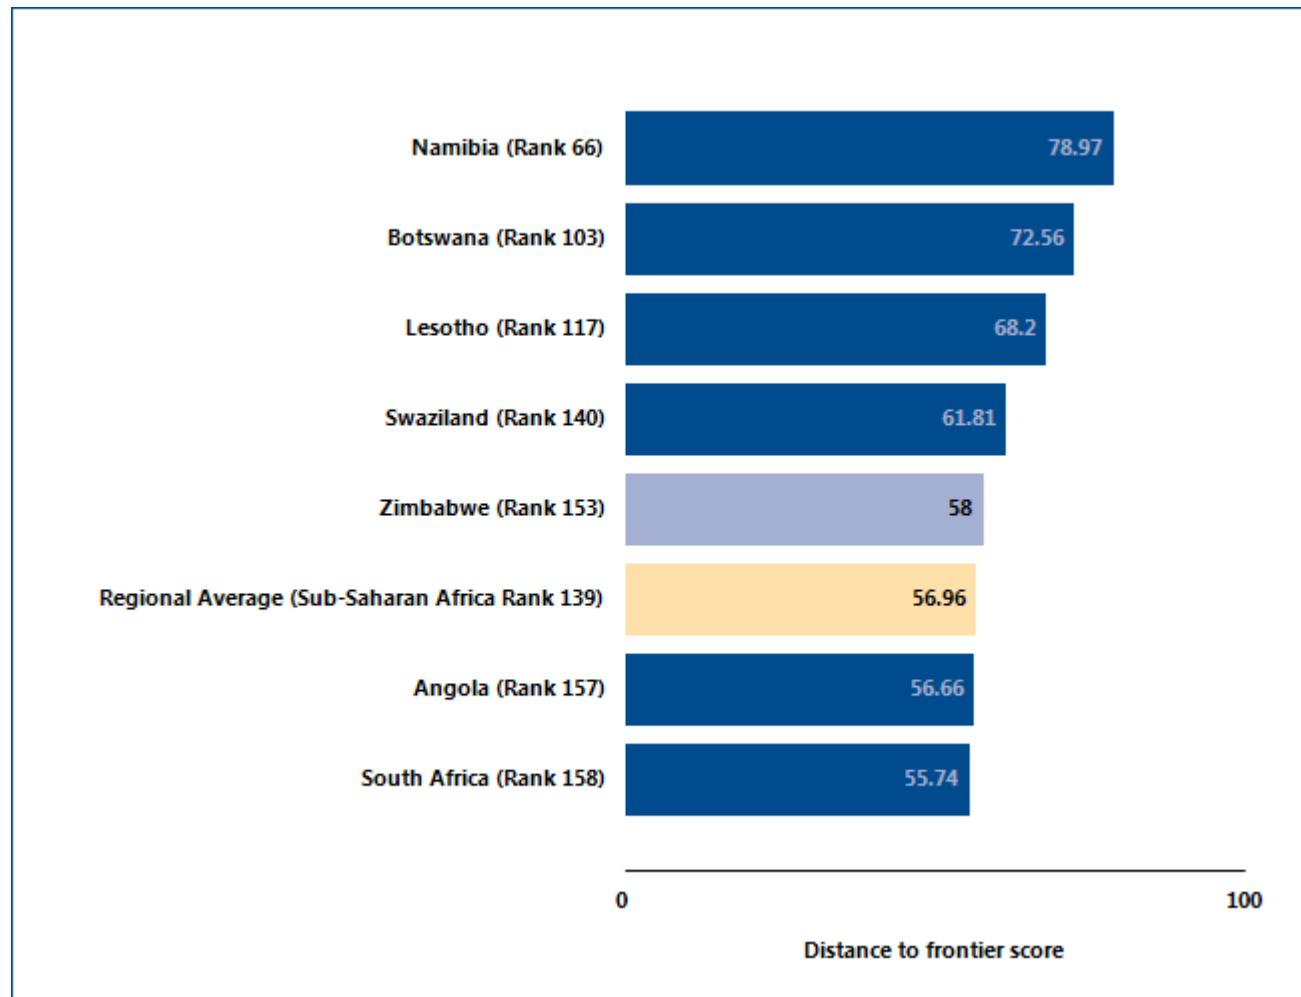

Source: *Doing Business* database.

GETTING ELECTRICITY

Globally, Zimbabwe stands at 153 in the ranking of 189 economies on the ease of getting electricity (figure 4.2). The rankings for comparator economies and the regional

average ranking provide another perspective in assessing how easy it is for an entrepreneur in Zimbabwe to connect a warehouse to electricity.

Figure 4.2 How Zimbabwe and comparator economies rank on the ease of getting electricity

Source: Doing Business database.

GETTING ELECTRICITY

What are the details?

The indicators reported here for Zimbabwe are based on a set of specific procedures—the steps that an entrepreneur must complete to get a warehouse connected to electricity by the local distribution utility—identified by *Doing Business*. Data are collected from the distribution utility, then completed and verified by electricity regulatory agencies and independent professionals such as electrical engineers, electrical contractors and construction companies. The electricity distribution utility surveyed is the one serving the area (or areas) in which warehouses are located. If there is a choice of distribution utilities, the one serving the largest number of customers is selected.

OBTAINING AN ELECTRICITY CONNECTION

Name of utility:	Zimbabwe Electricity Transmission and Distribution Company (ZETDC)
City:	Harare

The procedures are those that apply to a warehouse and electricity connection matching the standard assumptions used by *Doing Business* in collecting the data (see the section in this chapter on what the indicators cover). The procedures, along with the associated time and cost, are summarized below.

Table 4.2 Summary of time, cost and procedures for getting electricity in Zimbabwe -

No.	Procedure	Time to complete	Cost to complete
1	Submit application to ZETDC and await way leave approvals and quotation The application is submitted by the client/electrical contractor in person. To the application one needs to attach Company Registration Certificate copy. After the application is submitted ZETDC will be working on issuing the quotation to the client. At this point ZETDC will also seek and obtain way leave approvals from the Municipalities <i>Agency: ZETDC</i>	40 calendar days	USD 0
2	* Await external site inspection by ZETDC The site inspection is necessary to determine the "supply termination point". During the inspection, the utility also looks into the question of whether additional material is needed. <i>Agency: ZETDC</i>	1 calendar day	USD 0

No.	Procedure	Time to complete	Cost to complete
3	<p>The customer purchases material for external connection works</p> <p>Customers need to buy transformers and switchgear for the utility. The customer would buy the missing material from local providers. Transformers have to be of ZETDC approved type.</p> <p><i>Agency: Local providers</i></p>	19 calendar days	USD 0
4	<p>* Await internal wiring inspection from ZETDC</p> <p>On completion of the internal installation the electrician gives ZETDC a call and ZETDC will carry out an inspection. The electrician submits the completion form to ZETDC. Electrical standards are issued by the Standards Association of Zimbabwe (SAZ) and ZETDC. The standards require ZETDC to do an inspection.</p> <p><i>Agency: ZETDC</i></p>	4 calendar days	USD 0
5	<p>Await installation of the transformer by ZETDC</p> <p>The transformer is installed by the utility. The utility also does the connection between the internal sub-distribution board in the warehouse and the meter board.</p> <p><i>Agency: ZETDC</i></p>	9 calendar days	USD 24,947.8
6	<p>Await meter installation and electricity starts flowing by ZETDC</p> <p>A separate team than the one that does the connection works installs the meter. This team does a life test of the connection, tests the cable pressure, installs the meter and energizes the connection.</p> <p><i>Agency: ZETDC</i></p>	38 calendar days	USD 122.5

* Takes place simultaneously with another procedure.

Source: Doing Business database.

REGISTERING PROPERTY

Ensuring formal property rights is fundamental. Effective administration of land is part of that. If formal property transfer is too costly or complicated, formal titles might go informal again. And where property is informal or poorly administered, it has little chance of being accepted as collateral for loans—limiting access to finance.

What do the indicators cover?

Doing Business records the full sequence of procedures necessary for a business to purchase property from another business and transfer the property title to the buyer's name. The transaction is considered complete when it is opposable to third parties and when the buyer can use the property, use it as collateral for a bank loan or resell it. The ranking of economies on the ease of registering property is determined by sorting their distance to frontier scores for registering property. These scores are the simple average of the distance to frontier scores for each of the component indicators. To make the data comparable across economies, several assumptions about the parties to the transaction, the property and the procedures are used.

The parties (buyer and seller):

- Are limited liability companies, 100% domestically and privately owned and perform general commercial activities.
- Are located in the economy's largest business city².
- Have 50 employees each, all of whom are nationals.

The property (fully owned by the seller):

- Has a value of 50 times income per capita. The sale price equals the value.
- Is registered in the land registry or cadastral, or both, and is free of title disputes.
- Property will be transferred in its entirety.

WHAT THE REGISTERING PROPERTY INDICATORS MEASURE

Procedures to legally transfer title on immovable property (number)

Preregistration (for example, checking for liens, notarizing sales agreement, paying property transfer taxes)

Registration in the economy's largest business city²

Postregistration (for example, filing title with the municipality)

Time required to complete each procedure (calendar days)

Does not include time spent gathering information

Each procedure starts on a separate day. Procedures that can be fully completed online are recorded as ½ day.

Procedure considered completed once final document is received

No prior contact with officials

Cost required to complete each procedure (% of property value)

Official costs only, no bribes

No value added or capital gains taxes included

- Is located in a periurban commercial zone, and no rezoning is required.
- Has no mortgages attached, has been under the same ownership for the past 10 years.
- Consists of 557.4 square meters (6,000 square feet) of land and a 10-year-old, 2-story warehouse of 929 square meters (10,000 square feet). The warehouse is in good condition and complies with all safety standards, building codes and legal requirements. There is no heating system.

² For the 11 economies with a population of more than 100 million, data for a second city have been added.

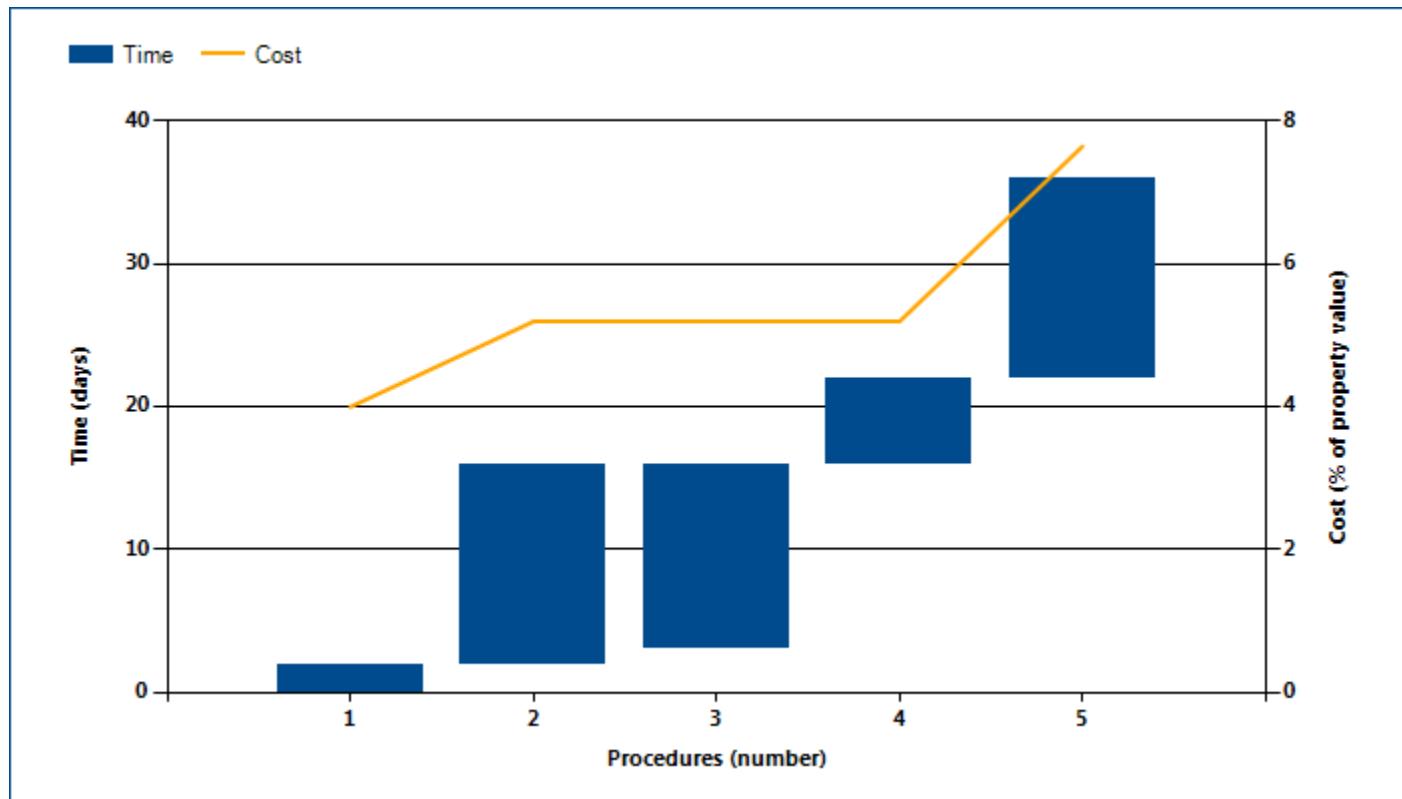

REGISTERING PROPERTY

Where does the economy stand today?

What does it take to complete a property transfer in Zimbabwe? According to data collected by *Doing Business*, registering property there requires 5.0 procedures, takes 36.0 days and costs 7.6% of the property value (figure 5.1).

Most indicator sets refer to a case scenario in the largest business city of an economy, except for 11 economies for which the data are a population-weighted average of the 2 largest business cities. See the chapter on distance to frontier and ease of doing business ranking at the end of this profile for more details.

Figure 5.1 What it takes to register property in Zimbabwe -

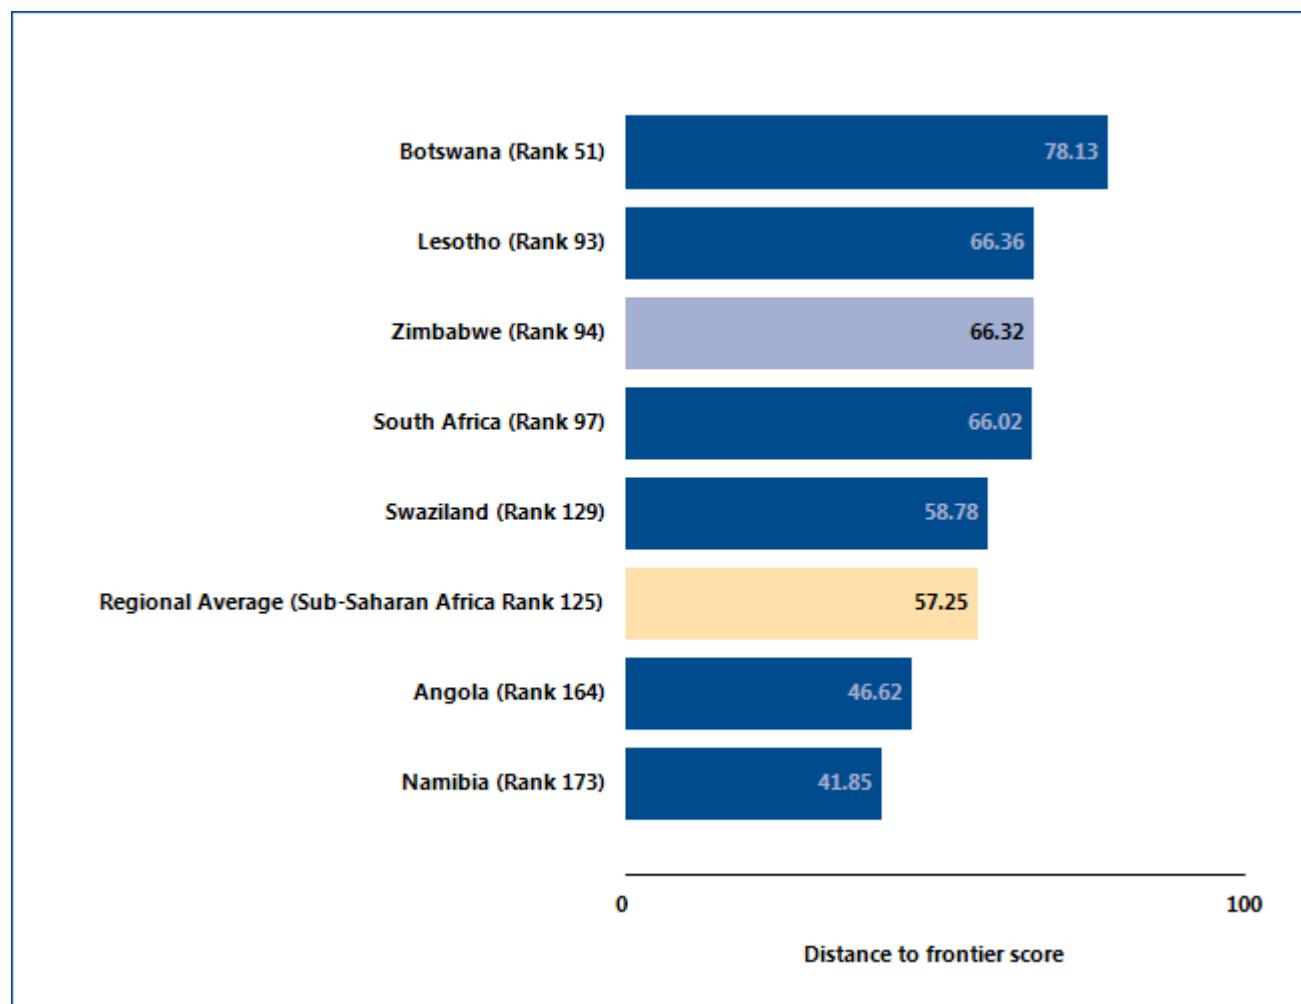

Note: Time shown in the figure above may not reflect simultaneity of procedures. Online procedures account for 0.5 days in the total time calculation. For more information on the methodology of the registering property indicators, see the *Doing Business* website (<http://www.doingbusiness.org>). For details on the procedures reflected here, see the summary at the end of this chapter.

REGISTERING PROPERTY

Globally, Zimbabwe stands at 94 in the ranking of 189 economies on the ease of registering property (figure 5.2). The rankings for comparator economies and the

regional average ranking provide other useful information for assessing how easy it is for an entrepreneur in Zimbabwe to transfer property.

Figure 5.2 How Zimbabwe and comparator economies rank on the ease of registering property

Source: Doing Business database.

REGISTERING PROPERTY

Economies worldwide have been making it easier for entrepreneurs to register and transfer property—such as by computerizing land registries, introducing time limits for procedures and setting low fixed fees. Many have cut

the time required substantially—enabling buyers to use or mortgage their property earlier. What property registration reforms has *Doing Business* recorded in Zimbabwe (table 5.1)?

Table 5.1 How has Zimbabwe made registering property easier—or not?

By *Doing Business* report year from DB2010 to DB2015

DB year	Reform
DB2010	Zimbabwe made transferring property less costly by introducing a new policy on the capital gains tax that resulted in a reduction in the actual amount paid.

Note: For information on reforms in earlier years (back to DB2005), see the *Doing Business* reports for these years, available at <http://www.doingbusiness.org>.

Source: *Doing Business* database.

REGISTERING PROPERTY

What are the details?

The indicators reported here are based on a set of specific procedures—the steps that a buyer and seller must complete to transfer the property to the buyer's name—identified by *Doing Business* through information collected from local property lawyers, notaries and property registries. These procedures are those that apply to a transaction matching the standard assumptions used by *Doing Business* in collecting the data (see the section in this chapter on what the indicators cover).

STANDARD PROPERTY TRANSFER

Property value: **USD 41,884**
City: **Harare**

The procedures, along with the associated time and cost, are summarized below.

Table 5.2 Summary of time, cost and procedures for registering property in Zimbabwe

No.	Procedure	Time to complete	Cost to complete
1	<p>The conveyancer prepares the draft deed, power of attorney to pass transfer as well as declarations for signing by buyer and seller</p> <p>Upon payment of transfer fees to the conveyance, he will draft a proposal deed of transfer (in duplicate) deriving the powers to do so from the signed and witnessed agreement of sale. In drafting the proposal transfer deed the conveyancer will always refer to the deed from the seller and other information from the Deeds Office. The proposal must also refer to the diagram deed which will be annexed to the first transfer deed.</p> <p>The documentation shall include:</p> <p>Declaration by seller and by purchaser (for stamp duty purposes)</p> <p>Sale agreement</p> <p>Power of Attorney to make the transfer</p> <p>A search of the property title is conducted by the Lawyer at the Land Registry</p> <p>Conveyancor fees are determined according to the following scale pursuant Law Society of Zimbabwe By-laws S.I. 24/2013 with effect since March 1st, 2013:</p> <p>US\$ 400 on first US\$ 10 000.00 and under 4% on next US\$ 10 000.00 - US\$ 250 000.00 of value, 3% on next US\$ 250 000.00 - US\$ 500 000.00, 2% on next US\$ 500 000.00 - 1 000 000.00 1% on next US\$ 1 000 000.00 and above</p> <p><i>Agency: Conveyancer</i></p>	1-3 days	Conveyancer's fees: 4% property value +15% VAT

No.	Procedure	Time to complete	Cost to complete
2	<p>The seller applies for the rates clearance certificate to the local authority under whose jurisdiction the property falls</p> <p>This application is performed by a conveyancor (fees already covered by Procedure 1). The local authority will provide an assessment of how much is payable by way of advance rates and outstanding rates, if any. In Zimbabwe there is at the moment no land tax, instead rates are paid to the local authority. So every property in Zimbabwe is subject to these rates paid by the property owner to the municipality or any other local authority for the services provided, like refuse, sewage etc. Before one can transfer a property all the rates due should be paid to the local authority, so it depends on outstanding amount due to the municipality. The rates in Zimbabwe are based on the value of the property, size and whether there are improvements or not. It is also important to note that the value of the property is a function of the location of the property. For the property we are talking about the rates would therefore be around ZWD 500. When the seller pays the outstanding rates payment he receives what is known as the rates clearance certificate. These rates are paid by the purchaser as pro forma costs, which will then be reimbursed by seller on the date of the transfer for the advance rates paid calculated on pro rata basis from the date of payment to date of transfer (where purchaser does not have vacant possession or occupation prior to transfer since in this event risk and profit in the property has usually passed in terms of the agreement of sale.)</p> <p>The rates account No. has to be supplied in the letter to the rates department. The local authority will only need to be furnished with details of the seller and buyer and their present postal or physical addresses, and description of the property being transferred. The amount to be paid will be dependent on whether there are any rates in arrears plus no less than 3 months rates paid in advance.</p> <p><i>Agency: Local Authority</i></p>	14 days (simultaneous with procedure 3)	USD 500 (Approx average for high density suburb, though rates constantly increase)
3	<p>* The seller applies for a capital gains tax clearance certificate (either withholding tax or Capital Gains tax)</p> <p>The capital gains tax (CGT) is assessed by the Zimbabwe Revenue Authority (ZIMRA), which determines how much is payable by way of capital gains tax. The rate is 20% on the gains and is paid by the seller. The Conveyancor will deliver the file in person to ZIMRA. ZIMRA customer service helps with the computation.</p> <p>The documentation required:</p> <ul style="list-style-type: none"> • Form REV 1 • Capital Gains Tax Clearance Application [C.G.T.1] Form • Original and copy of Title Deed • Original and copy of Seller and Buyer C.R.14 (The current list of Directors as registered at the Companies Office) • CR6 form (The company's registered address) • Agreement of Sale signed by both the buyer and seller (which will 	10-14 days (simultaneous with procedure 2)	<p>Capital gains Tax is 20% of the actual gains (not accounted here)</p> <p>*If Seller acquired the property before February 2009 then CGT liability is 5% of gross selling price.</p> <p>If property acquired after February 2009, then CGT calculated at 20%</p>

No.	Procedure	Time to complete	Cost to complete
	<p>provide the sale price, the expenses of the conveyansor)</p> <ul style="list-style-type: none"> • Original and copy of certificate of incorporation for both companies • Proof of payment • Directors' resolution to buy/sell this warehouse by both the buyer and seller (must be signed by the 2 Directors and the Public Officer/Company Secretary) • Original and copies of the ID's of the people mentioned in the Resolution • Contact details of the representative of both companies • Copy of Deed of Transfer <p>ZIMRA will conduct physical interviews on two directors; one from the selling, and one from the purchasing companies separately and normally on the day when the documents are submitted. The representatives from each company who are interviewed by ZIMRA are those who sign the Resolution of the Company and are the directors.</p> <p>After verification, ZIMRA will tabulate what is the actual cost of the CGT and will inform the conveyansor of the amount to be paid. A notice of payment is delivered to the Conveyansor providing details of ZIMRA bank account where the payment is to be made.</p> <p><i>Agency: Zimbabwe Revenue Authority (ZIMRA)</i></p>		of profit assessed from sale
4	<p>Payment of Capital Gains Tax and obtain CGT certificate with ZIMRA</p> <p>When the assessment is issued the seller is given a Business Partner No. which enables to pay capital gains tax. The conveyancer will pay the amount representing the CGT at the a commercial Bank. When payment is made one has to wait until the payment is reflected in the ZIMRA account after which a receipt is issued. The receipt will be surrendered to the ZIMRA official who did the interview for him/her to complete and issue the relevant certificate.</p> <p><i>Agency: Zimbabwe Revenue Authority (ZIMRA)</i></p>	2-10 days	no cost
5	<p>Transfer documents are lodged for registration of title with the Registrar of the Deeds' Office</p> <p>The stamp duty is paid upon lodging at the Deeds Office. The copies of the deeds are lodged with the Registrar of Deeds for examination upon payment of the registration fee and the stamp duty (according to Finance Bill 2009, for payments made in foreign currency). The deed is signed (registered) by the Registrar of Deeds or his/her designate. One copy of the deed is filed in the Office of the Registrar of Deed and the second one sent back to the conveyancer for onward transmission to his/her client (the new property owner).</p> <p>The documentation shall include:</p> <p>Rates clearance certificate (obtained in Procedure 3) Capital gains tax clearance (obtained in Procedure 2)</p>	14 days	Registration fee USD 20 and Stamp duty: 1% for first USD 5,0002% for next USD 15,0003% for next USD 80,0004% for USD balance

No.	Procedure	Time to complete	Cost to complete
	<p>Two copies of the draft deed Power of attorney to pass transfer Declaration by seller and buyer Original holding deed</p> <p>The Deeds Office no longer has the capacity of sending the properties for valuation. Unless ZIMRA calls for a valuation of the property sold, once CGT clearance is obtained the Deeds office does not have a basis for sending properties for valuation. Prior to ZIMRA taking over this responsibility, the Deeds office could and did send properties for valuation in case of errors or disagreements regarding the value of the property.</p> <p><i>Agency: Deeds Office</i></p>		

* Takes place simultaneously with another procedure.

Note: Online procedures account for 0.5 days in the total time calculation.

Source: Doing Business database.

GETTING CREDIT

Two types of frameworks can facilitate access to credit and improve its allocation: credit information systems and borrowers and lenders in collateral and bankruptcy laws. Credit information systems enable lenders' rights to view a potential borrower's financial history (positive or negative)—valuable information to consider when assessing risk. And they permit borrowers to establish a good credit history that will allow easier access to credit. Sound collateral laws enable businesses to use their assets, especially movable property, as security to generate capital—while strong creditors' rights have been associated with higher ratios of private sector credit to GDP.

What do the indicators cover?

Doing Business assesses the sharing of credit information and the legal rights of borrowers and lenders with respect to secured transactions through 2 sets of indicators. The depth of credit information index measures rules and practices affecting the coverage, scope and accessibility of credit information available through a credit registry or a credit bureau. The strength of legal rights index measures whether certain features that facilitate lending exist within the applicable collateral and bankruptcy laws. *Doing Business* uses two case scenarios, Case A and Case B, to determine the scope of the secured transactions system, involving a secured borrower and a secured lender and examining legal restrictions on the use of movable collateral (for more details on each case, see the Data Notes section of the *Doing Business 2015* report). These scenarios assume that the borrower:

- Is a private limited liability company.
- Has its headquarters and only base of operations in the largest business city. For the 11 economies with a population of more than 100 million, data for a second city have been added.

WHAT THE GETTING CREDIT INDICATORS MEASURE

Strength of legal rights index (0–12)³

Rights of borrowers and lenders through collateral laws
Protection of secured creditors' rights through bankruptcy laws

Depth of credit information index (0–8)⁴

Scope and accessibility of credit information distributed by credit bureaus and credit registries

Credit bureau coverage (% of adults)

Number of individuals and firms listed in largest credit bureau as percentage of adult population

Credit registry coverage (% of adults)

Number of individuals and firms listed in credit registry as percentage of adult population

- Has up to 50 employees.
- Is 100% domestically owned, as is the lender.

The ranking of economies on the ease of getting credit is determined by sorting their distance to frontier scores for getting credit. These scores are the distance to frontier score for the strength of legal rights index and the depth of credit information index.

³ For the legal rights index, 2 new points are added in *Doing Business 2015* for new data collected to assess the overall legal framework for secured transactions and the functioning of the collateral registry.

⁴ For the credit information index, 2 new points are added in *Doing Business 2015* for new data collected on accessing borrowers' credit information online and availability of credit scores.

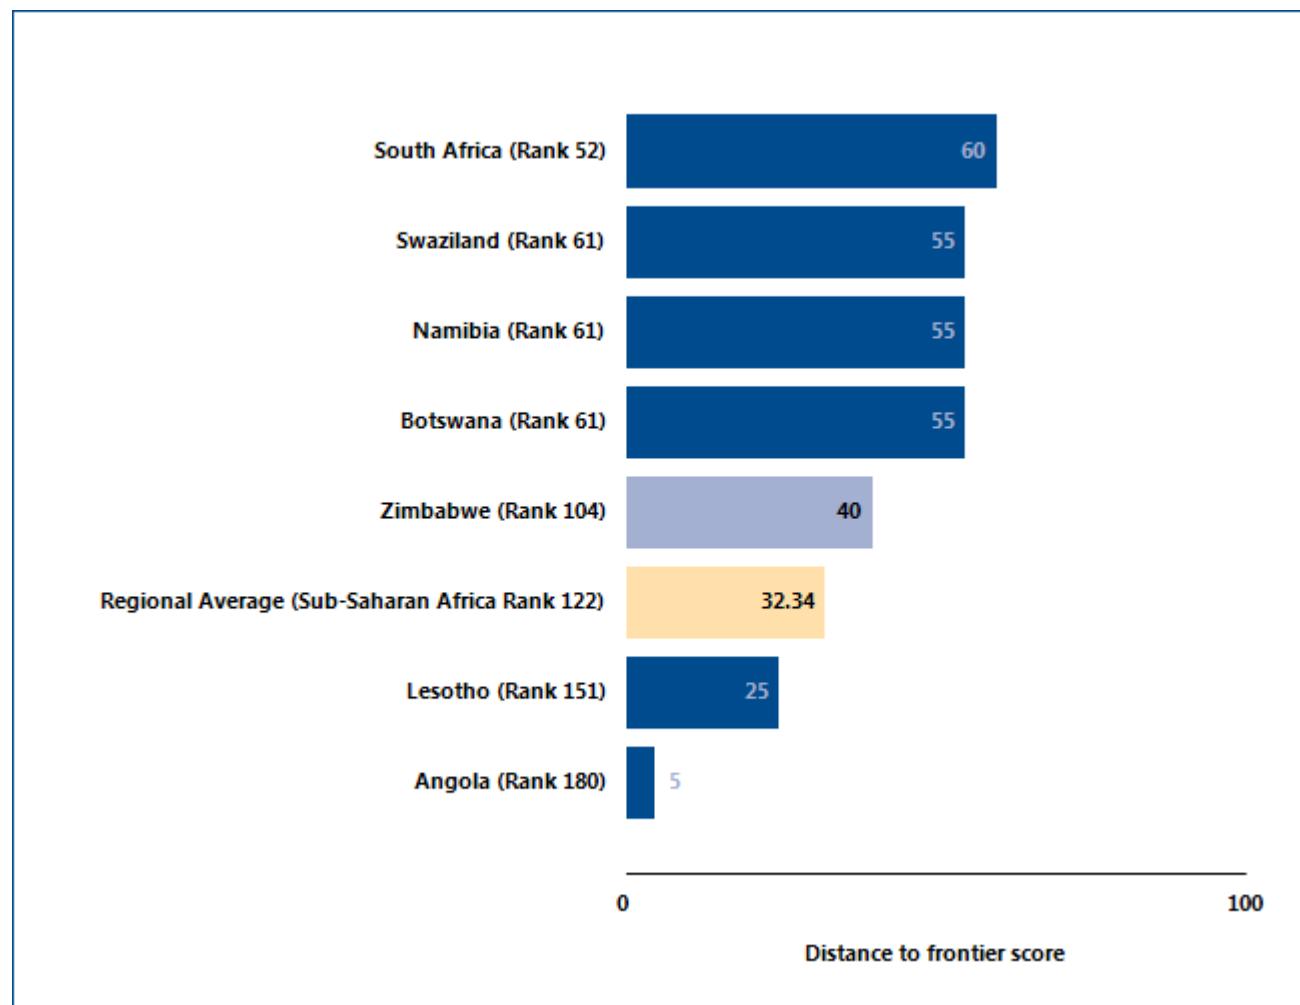

GETTING CREDIT

Where does the economy stand today?

How well do the credit information system and collateral and bankruptcy laws in Zimbabwe facilitate access to credit? The economy has a score of 3 on the depth of credit information index and a score of 5 on the strength of legal rights index (see the summary of scoring at the end of this chapter for details). Higher scores indicate more credit information and stronger legal rights for borrowers and lenders.

Globally, Zimbabwe stands at 104 in the ranking of 189 economies on the ease of getting credit (figure 6.1). The rankings for comparator economies and the regional average ranking provide other useful information for assessing how well regulations and institutions in Zimbabwe support lending and borrowing.

Figure 6.1 How Zimbabwe and comparator economies rank on the ease of getting credit

Source: Doing Business database.

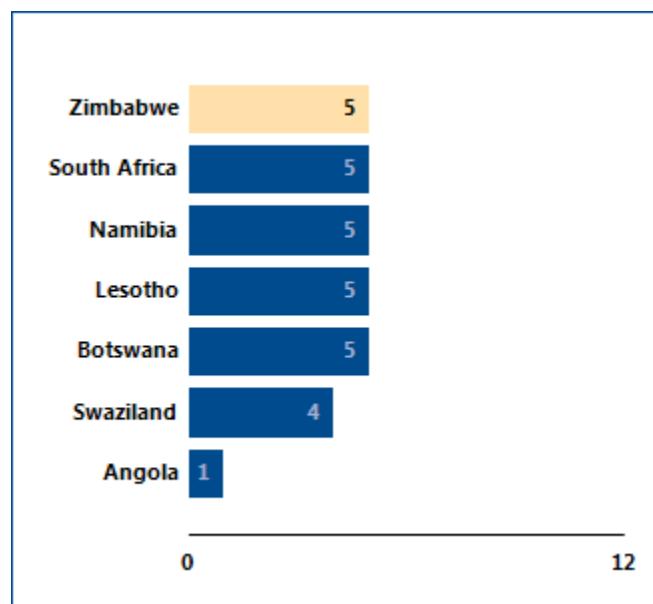

GETTING CREDIT

One way to put an economy's score on the getting credit indicators into context is to see where the economy stands in the distribution of scores across economies. Figure 6.2 highlights the score on the strength of legal

rights index for Zimbabwe and shows the scores for comparator economies as well as the regional average score. Figure 6.3 shows the same for the depth of credit information index.

Figure 6.2 How strong are legal rights for borrowers and lenders?

Economy scores on strength of legal rights index

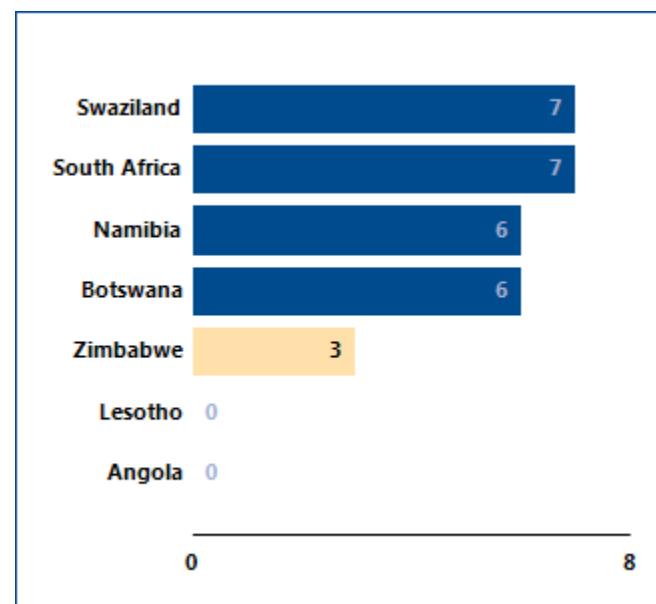

Note: Higher scores indicate that collateral and bankruptcy laws are better designed to facilitate access to credit.

Source: *Doing Business* database.

Figure 6.3 How much credit information is shared—and how widely?

Economy scores on depth of credit information index

Note: Higher scores indicate the availability of more credit information, from either a credit registry or a credit bureau, to facilitate lending decisions. If the credit bureau or registry is not operational or covers less than 5% of the adult population, the total score on the depth of credit information index is 0.

Source: *Doing Business* database.

GETTING CREDIT

What are the details?

The getting credit indicators reported here for Zimbabwe are based on detailed information collected in that economy. The data on credit information sharing are collected through a survey of a credit registry and/or credit bureau (if one exists). To construct the depth of credit information index, a score of 1 is assigned for each of 8 features of the credit registry or credit bureau (see summary of scoring below).

The data on the legal rights of borrowers and lenders are gathered through a survey of financial lawyers and verified through analysis of laws and regulations as well as public sources of information on collateral and bankruptcy laws. For the strength of legal rights index, a score of 1 is assigned for each of 10 aspects related to legal rights in collateral law and 2 aspects in bankruptcy law.

Strength of legal rights index (0–12)	Index score: 5
Does an integrated or unified legal framework for secured transactions that extends to the creation, publicity and enforcement of functional equivalents to security interests in movable assets exist in the economy?	No
Does the law allow businesses to grant a non possessory security right in a single category of movable assets, without requiring a specific description of collateral?	Yes
Does the law allow businesses to grant a non possessory security right in substantially all of its assets, without requiring a specific description of collateral?	Yes
May a security right extend to future or after-acquired assets, and may it extend automatically to the products, proceeds or replacements of the original assets?	Yes
Is a general description of debts and obligations permitted in collateral agreements; can all types of debts and obligations be secured between parties; and can the collateral agreement include a maximum amount for which the assets are encumbered?	Yes
Is a collateral registry in operation for both incorporated and non-incorporated entities, that is unified geographically and by asset type, with an electronic database indexed by debtor's name?	No
Does a notice-based collateral registry exist in which all functional equivalents can be registered?	No
Does a modern collateral registry exist in which registrations, amendments, cancellations and searches can be performed online by any interested third party?	No
Are secured creditors paid first (i.e. before tax claims and employee claims) when a debtor defaults outside an insolvency procedure?	Yes
Are secured creditors paid first (i.e. before tax claims and employee claims) when a business is liquidated?	No
Are secured creditors subject to an automatic stay on enforcement when a debtor enters a court-supervised reorganization procedure? Does the law protect secured creditors' rights by providing clear grounds for relief from the stay and/or sets a time limit for it?	No

Strength of legal rights index (0–12)	Index score: 5
Does the law allow parties to agree on out of court enforcement at the time a security interest is created? Does the law allow the secured creditor to sell the collateral through public auction and private tender, as well as, for the secured creditor to keep the asset in satisfaction of the debt?	No

Depth of credit information index (0–8)	Credit bureau	Credit registry	Index score: 3
Are data on both firms and individuals distributed?	No	No	0
Are both positive and negative credit data distributed?	Yes	No	1
Are data from retailers or utility companies - in addition to data from banks and financial institutions - distributed?	No	No	0
Are at least 2 years of historical data distributed? (Credit bureaus and registries that distribute more than 10 years of negative data or erase data on defaults as soon as they are repaid obtain a score of 0 for this component.)	Yes	No	1
Are data on loan amounts below 1% of income per capita distributed?	No	No	0
By law, do borrowers have the right to access their data in the credit bureau or credit registry?	No	No	0
Can banks and financial institutions access borrowers' credit information online (for example, through an online platform, a system-to-system connection or both)?	Yes	No	1
Are bureau or registry credit scores offered as a value-added service to help banks and financial institutions assess the creditworthiness of borrowers?	No	No	0

Note: Prior to *Doing Business 2015*, the depth of credit information index covered only the first 6 features listed above. An economy receives a score of 1 if there is a "yes" to either bureau or registry. If the credit bureau or registry is not operational or covers less than 5% of the adult population, the total score on the depth of credit information index is 0.

Coverage	Credit bureau (% of adults)	Credit registry (% of adults)
Number of firms	5,000	0
Number of individuals	458,000	0
Percent of total	5.8	0.0

Source: Doing Business database.

PROTECTING MINORITY INVESTORS

Protecting minority investors matters for the ability of companies to raise the capital they need to grow, innovate, diversify and compete. Effective regulations define related-party transactions precisely, promote clear and efficient disclosure requirements, require shareholder participation in major decisions of the company and set detailed standards of accountability for company insiders.

What do the indicators cover?

Doing Business measures the protection of minority investors from conflicts of interest through one set of indicators and shareholders' rights in corporate governance through another. The ranking of economies on the strength of minority investor protections is determined by sorting their distance to frontier scores for protecting minority investors. These scores are the simple average of the distance to frontier scores for the extent of conflict of interest regulation index and the extent of shareholder governance index. To make the data comparable across economies, a case study uses several assumptions about the business and the transaction.

The business (Buyer):

- Is a publicly traded corporation listed on the economy's most important stock exchange (or at least a large private company with multiple shareholders).
- Has a board of directors and a chief executive officer (CEO) who may legally act on behalf of Buyer where permitted, even if this is not specifically required by law.

The transaction involves the following details:

- Mr. James, a director and the majority shareholder of the company, proposes that the company purchase used trucks from another company he owns.
- The price is higher than the going price for used trucks, but the transaction goes forward.
- All required approvals are obtained, and all required disclosures made, though the transaction is prejudicial to Buyer.
- Shareholders sue the interested parties and the members of the board of directors.

WHAT THE PROTECTING MINORITY INVESTORS INDICATORS MEASURE

Extent of disclosure index (0–10)

Review and approval requirements for related-party transactions ; Disclosure requirements for related-party transactions

Extent of director liability index (0–10)

Ability of minority shareholders to sue and hold interested directors liable for prejudicial related-party transactions; Available legal remedies (damages, disgorgement of profits, fines, imprisonment, rescission of the transaction)

Ease of shareholder suits index (0–10)

Access to internal corporate documents; Evidence obtainable during trial and allocation of legal expenses

Extent of conflict of interest regulation index (0–10)

Sum of the extent of disclosure, extent of director liability and ease of shareholder indices, divided by 3

Extent of shareholder rights index (0–10.5)

Shareholders' rights and role in major corporate decisions

Strength of governance structure index (0–10.5)

Governance safeguards protecting shareholders from undue board control and entrenchment

Extent of corporate transparency index (0–9)

Corporate transparency on ownership stakes, compensation, audits and financial prospects

Extent of shareholder governance index (0–10)

Sum of the extent of shareholders rights, strength of governance structure and extent of corporate transparency indices, divided by 3

Strength of investor protection index (0–10)

Simple average of the extent of conflict of interest regulation and extent of shareholder governance indices

PROTECTING MINORITY INVESTORS

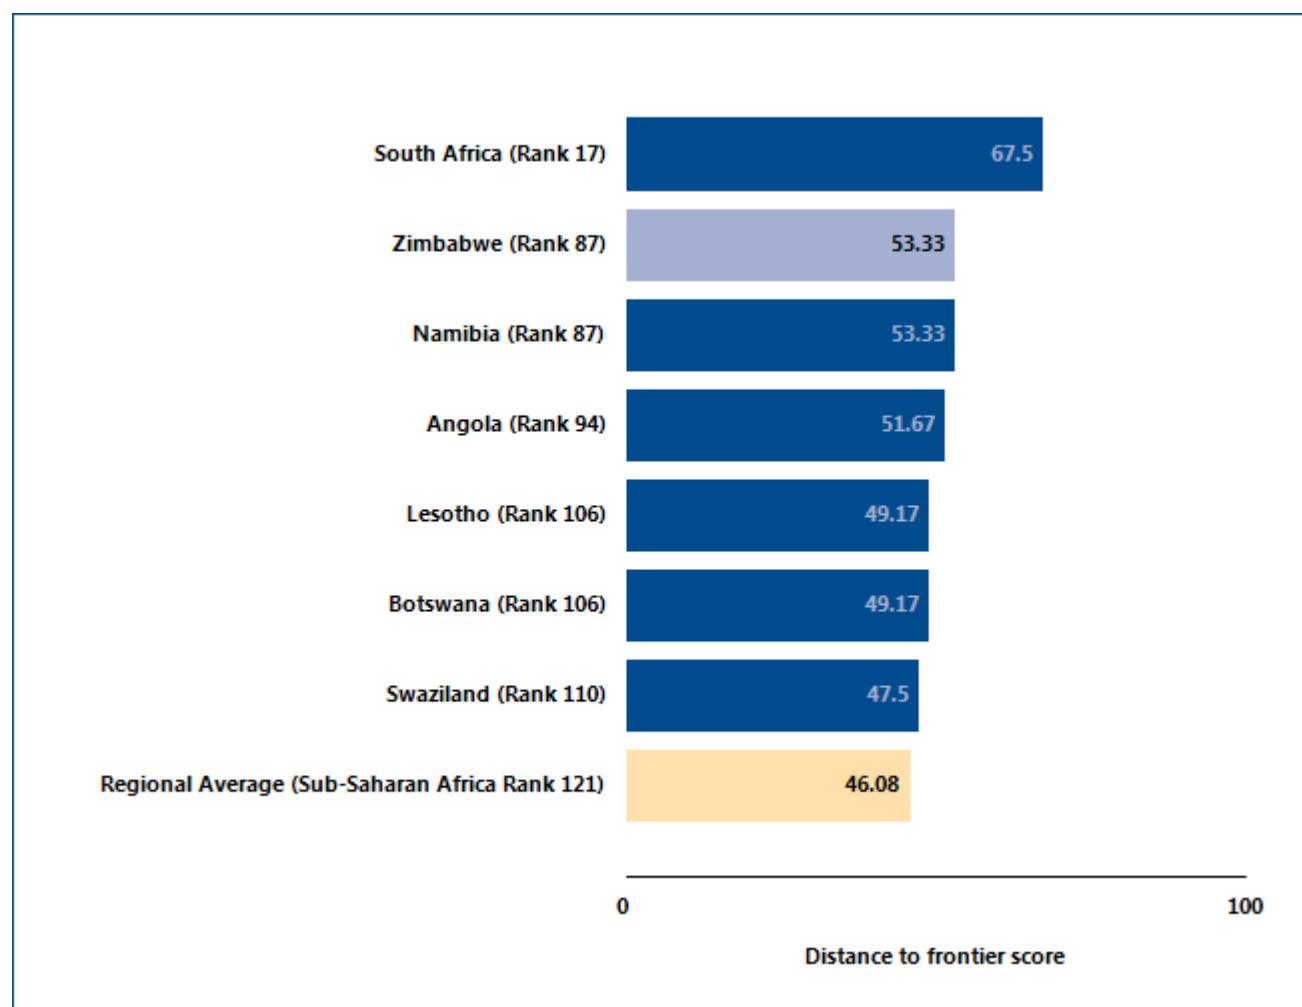

Where does the economy stand today?

How strong are minority investor protections against self-dealing in Zimbabwe? The economy has a score of 5.3 on the strength of minority investor protection index, with a higher score indicating stronger protections.

Globally, Zimbabwe stands at 87 in the ranking of 189 economies on the strength of minority investor

protection index (figure 7.1). While the indicator does not measure all aspects related to the protection of minority investors, a higher ranking does indicate that an economy's regulations offer stronger minority investor protections against self-dealing in the areas measured.

Figure 7.1 How Zimbabwe and comparator economies perform on the strength of minority investor protection index

Source: Doing Business database.

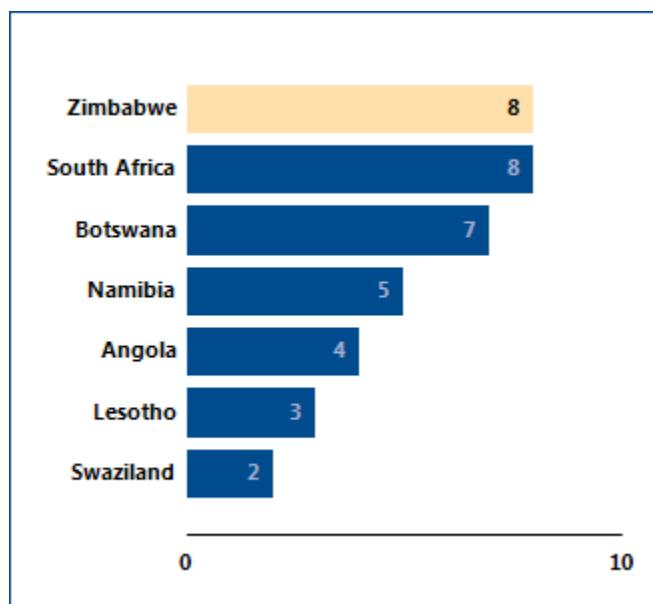

PROTECTING MINORITY INVESTORS

One way to put an economy's scores on the protecting minority investors indicators into context is to see where the economy stands in the distribution of scores across comparator economies. Figures 7.2 through 7.7 highlight the scores on the various minority investor protection

indices for Zimbabwe in 2014. A summary of scoring for the protecting minority investors indicators at the end of this chapter provides details on how the indices were calculated.

Figure 7.2 How extensive are disclosure requirements?

Extent of disclosure index (0-10)

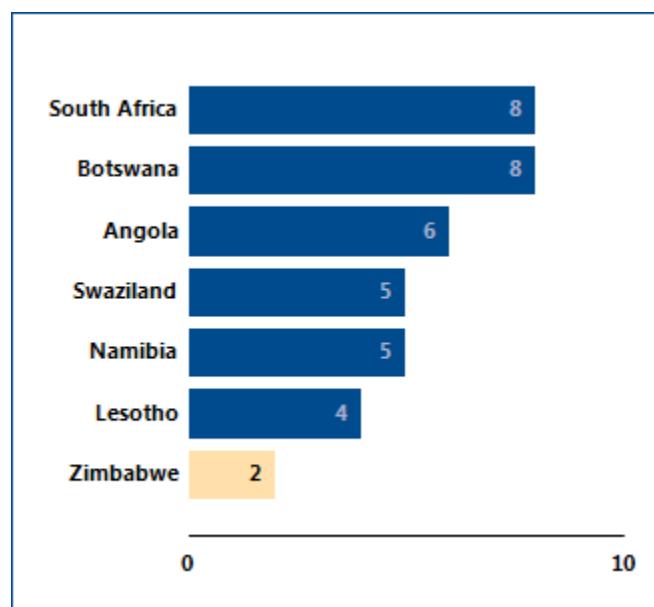

Note: Higher scores indicate greater disclosure.

Source: *Doing Business* database.

Figure 7.3 How extensive is the liability regime for directors?

Extent of director liability index (0-10)

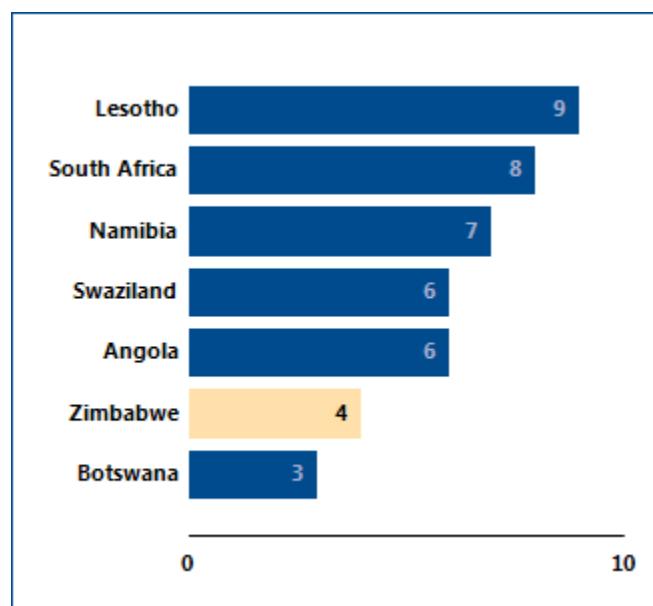

Note: Higher scores indicate greater liability of directors.

Source: *Doing Business* database.

PROTECTING MINORITY INVESTORS

Figure 7.4 How easy is accessing internal corporate documents?

Ease of shareholder suits index (0-10)

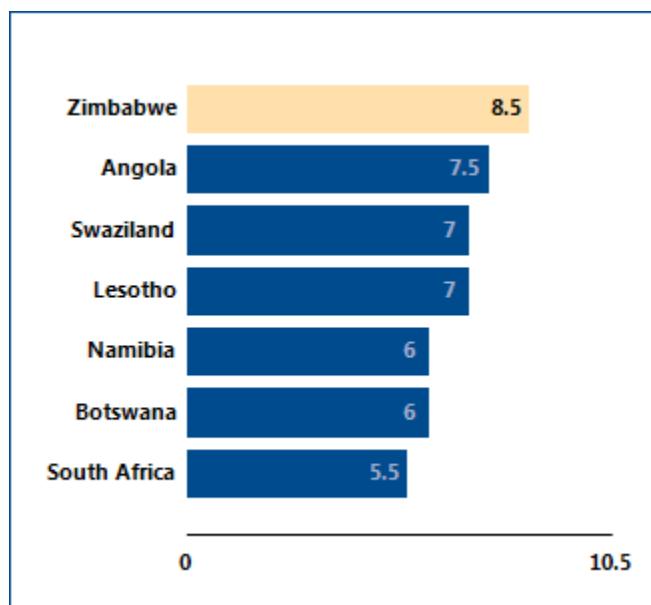

Note: Higher scores indicate greater minority shareholder access to evidence before and during trial.

PROTECTING MINORITY INVESTORS

What are the details?

The protecting minority investors indicators reported here for Zimbabwe are based on detailed information collected through a survey of corporate and securities lawyers about securities regulations, company laws and court rules of evidence and procedure. To construct the six indicators on minority investor protection, scores are assigned to each based on a range of conditions relating

to disclosure, director liability, shareholder suits, shareholder rights, governance structure and corporate transparency in a standard case study (for more details, see the Data Notes section of the *Doing Business 2015* report). The summary below shows the details underlying the scores for Zimbabwe.

Table 7.2 Summary of scoring for the protecting minority investors indicators in Zimbabwe

	Answer	Score
Extent of disclosure index (0-10)		8.0
Which corporate body can provide legally sufficient approval for the Buyer-Seller transaction? (0-3)	Board of directors excluding interested members	2
Is disclosure by the interested director to the board of directors required? (0-2)	Full disclosure of all material facts	2
Is disclosure of the transaction in published periodic filings (annual reports) required? (0-2)	Disclosure on the transaction only	1
Is immediate disclosure of the transaction to the public and/or shareholders required? (0-2)	Disclosure on the transaction and on the conflict of interest	2
Must an external body review the terms of the transaction before it takes place? (0-1)	Yes	1
Extent of director liability index (0-10)		2.0
Can shareholders sue directly or derivatively for the damage caused by the Buyer-Seller transaction to the company? (0-1)	Yes	1
Can shareholders hold the interested director liable for the damage caused by the transaction to the company? (0-2)	Not liable	0
Can shareholders hold members of the approving body liable for the damage cause by the transaction to the company? (0-2)	Liable if negligent	1
Must the interested director pay damages for the harm caused to the company upon a successful claim by a shareholder plaintiff? (0-1)	No	0
Must the interested director repay profits made from the transaction upon a successful claim by a shareholder plaintiff? (0-1)	No	0
Can both fines and imprisonment be applied against the interested director? (0-1)	No	0
Can a court void the transaction upon a successful claim by a shareholder plaintiff? (0-2)	Only in case of fraud or bad faith	0
Ease of shareholder suits index (0-10)		4.0
Before filing suit, can shareholders owning 10% of the company's share capital inspect the transaction documents? (0-1)	Yes	1
Can the plaintiff obtain any documents from the defendant	No	0

and witnesses during trial? (0-3)		
Can the plaintiff request categories of documents from the defendant without identifying specific ones? (0-1)	No	0
Can the plaintiff directly question the defendant and witnesses during trial? (0-2)	Yes	2
Is the level of proof required for civil suits lower than that of criminal cases? (0-1)	Yes	1
Can shareholder plaintiffs recover their legal expenses from the company? (0-2)	At the discretion of the court	0
Strength of minority investor protection index (0-10)		5.3
Extent of conflict of interest regulation index (0-10)		4.7
Extent of shareholder rights index (0-10.5)		8.5
Can shareholders amend company bylaws or statutes with a simple majority?	No	0
Can shareholders owning 10% of the company's share capital call for an extraordinary meeting of shareholders?	Yes	1.5
Can shareholders remove members of the board of directors before the end of their term?	Yes	1.5
Must a company obtain its shareholders' approval every time it issues new shares?	Yes	1.5
Are shareholders automatically granted subscription rights on new shares?	Yes for listed companies	1
Must shareholders approve the election and dismissal of the external auditor?	Yes	1.5
Can shareholders freely trade shares prior to a major corporate action or meeting of shareholders?	Yes	1.5
Strength of governance structure index (0-10.5)		4.5
Is the CEO barred from also serving as chair of the board of directors?	No	0
Must the board of directors include independent board members?	No	0
Must a company have a separate audit committee?	No	0
Must changes to the voting rights of a series or class of shares be approved only by the holders of the affected shares?	Yes	1.5
Must a potential acquirer make a tender offer to all shareholders upon acquiring 50% of a company?	Yes	1.5
Is cross-shareholding between 2 independent companies limited to 10% of outstanding shares?	No	0
Is a subsidiary barred from acquiring shares issued by its parent company?	Yes	1.5
Extent of corporate transparency index (0-9)		5.0
Must ownership stakes representing 10% be disclosed?	No	0
Must information about board members' other directorships as well as basic information on their primary employment be disclosed?	Yes	1.5
Must the compensation of individual managers be disclosed?	No	0
Must financial statements contain explanatory notes on significant accounting policies, trends, risks, uncertainties and other factors influencing the reporting?	Yes	1.5
Must annual financial statements be audited by an external	Yes for listed companies	1

auditor?		
Must audit reports be disclosed to the public?	Yes for listed companies	1
Extent of shareholder governance index (0-10)		6.0

Source: Doing Business database.

PAYING TAXES

Taxes are essential. The level of tax rates needs to be carefully chosen—and needless complexity in tax rules avoided. Firms in economies that rank better on the ease of paying taxes in the *Doing Business* study tend to perceive both tax rates and tax administration as less of an obstacle to business according to the World Bank Enterprise Survey research.

What do the indicators cover?

Using a case scenario, *Doing Business* measures the taxes and mandatory contributions that a medium-size company must pay in a given year as well as the administrative burden of paying taxes and contributions. This case scenario uses a set of financial statements and assumptions about transactions made over the year. Information is also compiled on the frequency of filing and payments as well as time taken to comply with tax laws. The ranking of economies on the ease of paying taxes is determined by sorting their distance to frontier scores on the ease of paying taxes. These scores are the simple average of the distance to frontier scores for each of the component indicators, with a threshold and a nonlinear transformation applied to one of the component indicators, the total tax rate⁵. The financial statement variables have been updated to be proportional to 2012 income per capita; previously they were proportional to 2005 income per capita. To make the data comparable across economies, several assumptions are used.

- TaxpayerCo is a medium-size business that started operations on January 1, 2012.
 - The business starts from the same financial

⁵ The nonlinear distance to frontier for the total tax rate is equal defined as the total tax rate at the 15th percentile of the overall yearly basis. The frontier is also based on any economic system of an economy overall. Instead, it is mainly empirical in enterprises in the manufacturing sector as observed through that do not need to pay significant taxes on companies like in other ways—for example, through taxes on foreign companies of which are outside the scope of the methodology). This year

WHAT THE PAYING TAXES INDICATORS

MEASURE

Tax payments for a manufacturing company in 2013 (number per year adjusted for electronic and joint filing and payment)

Total number of taxes and contributions paid, including consumption taxes (value added tax, sales tax or goods and service tax)

Method and frequency of filing and payment

Time required to comply with 3 major taxes (hours per year)

Collecting information and computing the tax payable

Completing tax return forms, filing with proper agencies

Arranging payment or withholding

Preparing separate tax accounting books, if required

Total tax rate (% of profit before all taxes)

Profit or corporate income tax

Social contributions and labor taxes paid by the employer

Property and property transfer taxes

Dividend, capital gains and financial transactions taxes

Waste collection, vehicle, road and other taxes

- Taxes and mandatory contributions include corporate income tax, turnover tax and all labor taxes and contributions paid by the instance to contribute to the total tax base, respectively. The tax on for *adversaries* included in the analysis. It is calculated and ad-

⁵ The nonlinear distance to frontier for the total tax rate is equal to the distance that the company would have to move to pay the same taxes as the company with the lowest total tax rate in the sample. The threshold is defined as the total tax rate at the 95th percentile of the overall distribution for all firms included in the analysis. It is calculated and adjusted on a yearly basis.⁶ The threshold is also the base for any economic theory of an “optimal tax rate” that minimizes distortions or maximizes efficiency in the tax system of an economy overall. Instead, it is mainly empirical in nature, set at the average of the distribution of total taxes paid on medium-size enterprises in the manufacturing sector as observed through the paying taxes index.⁷ Exemption areas are also recorded as indicators toward economies that do not need to levy significant taxes on companies like the *Doing Business* standardized case study company because they raise public revenue in other ways—for example, through taxes on foreign companies, through taxes on sectors other than manufacturing or from natural resources (all of which are outside the scope of the methodology). This year’s threshold is 26.1%.

PAYING TAXES

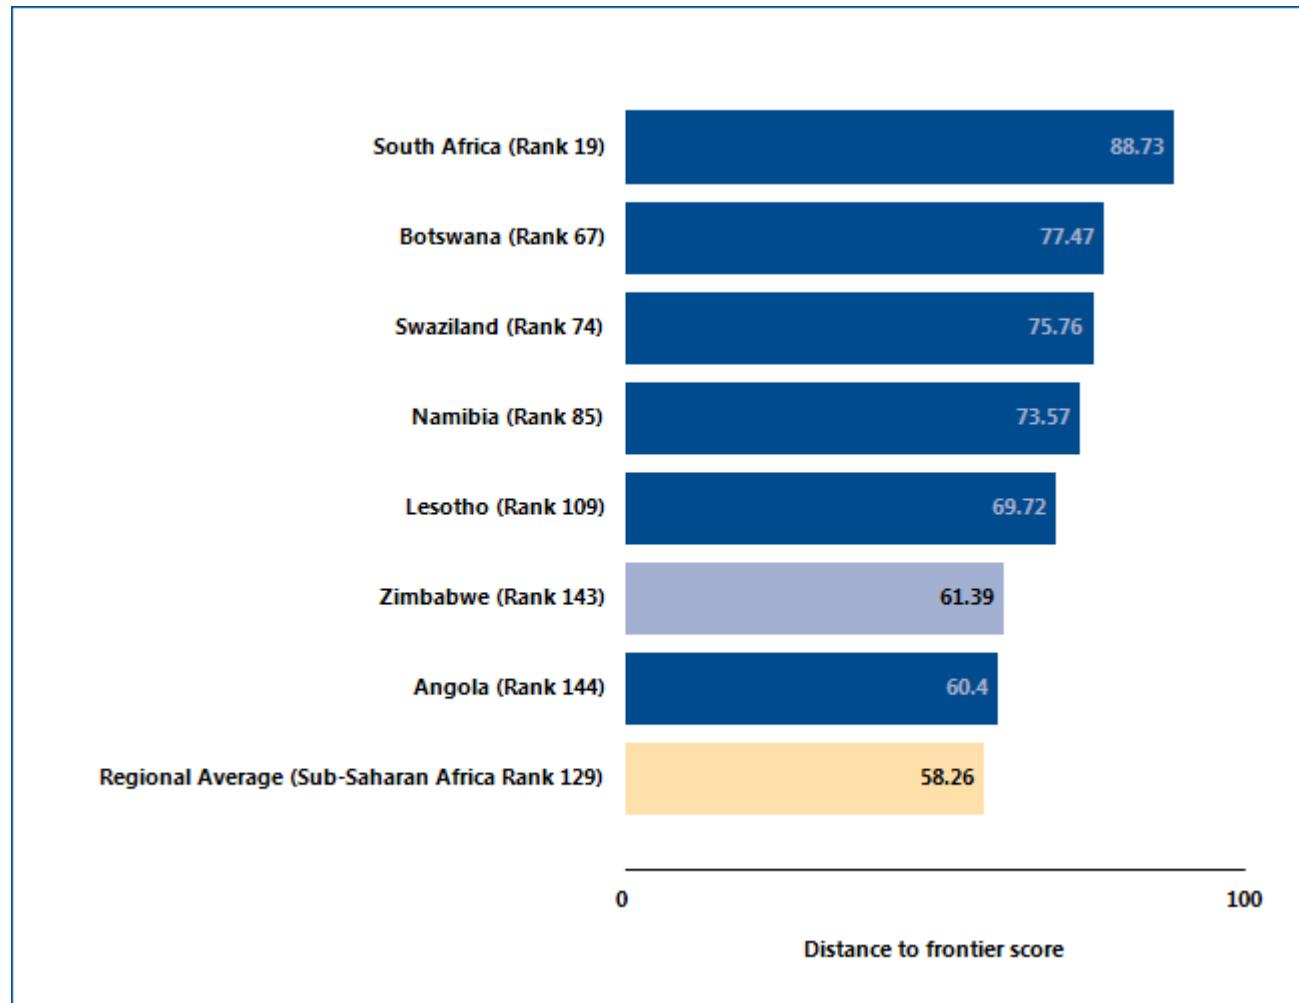

Where does the economy stand today?

What is the administrative burden of complying with taxes in Zimbabwe—and how much do firms pay in taxes? On average, firms make 49.0 tax payments a year, spend 242.0 hours a year filing, preparing and paying taxes and pay total taxes amounting to 32.8% of profit (see the summary at the end of this chapter for details). Most indicator sets refer to a case scenario in the largest business city of an economy, except for 11 economies for which the data are a population-weighted average of the

2 largest business cities. See the chapter on distance to frontier and ease of doing business ranking at the end of this profile for more details.

Globally, Zimbabwe stands at 143 in the ranking of 189 economies on the ease of paying taxes (figure 8.1). The rankings for comparator economies and the regional average ranking provide other useful information for assessing the tax compliance burden for businesses in Zimbabwe.

Figure 8.1 How Zimbabwe and comparator economies rank on the ease of paying taxes

Source: Doing Business database.

PAYING TAXES

Economies around the world have made paying taxes faster and easier for businesses—such as by consolidating filings, reducing the frequency of payments or offering electronic filing and payment. Many have lowered tax rates. Changes have brought

concrete results. Some economies simplifying tax payment and reducing rates have seen tax revenue rise. What tax reforms has *Doing Business* recorded in Zimbabwe (table 8.1)?

Table 8.1 How has Zimbabwe made paying taxes easier—or not?

By *Doing Business* report year from DB2010 to DB2015

DB year	Reform
DB2011	Zimbabwe reduced the corporate income tax rate from 30% to 25%, lowered the capital gains tax from 20% to 5% and simplified the payment of corporate income tax by allowing quarterly payment through commercial banks.

Note: For information on reforms in earlier years (back to DB2006), see the *Doing Business* reports for these years, available at <http://www.doingbusiness.org>.

Source: *Doing Business* database.

PAYING TAXES

What are the details?

The indicators reported here for Zimbabwe are based on the taxes and contributions that would be paid by a standardized case study company used by *Doing Business* in collecting the data (see the section in this chapter on what the indicators cover). Tax practitioners are asked to review a set of financial statements as well as a standardized list of assumptions and transactions that the company completed during its 2nd year of operation. Respondents are asked how much taxes and mandatory contributions the business must pay and how these taxes are filed and paid.

LOCATION OF STANDARDIZED COMPANY

City: Harare

The taxes and contributions paid are listed in the summary below, along with the associated number of payments, time and tax rate.

Table 8.2 Summary of tax rates and administration

Tax or mandatory contribution	Payments (number)	Notes on payments	Time (hours)	Statutory tax rate	Tax base	Total tax rate (% of profit)	Notes on total tax rate
Corporate income tax	4		78	25%	taxable profit	17.9	
Property tax	12		0	various rates	property value	8.1	
Social security contributions	0	paid jointly	96	3%	gross salaries with ceiling	3.6	
Manpower development duty	12		0	1%	gross salaries	1.1	
Capital gains tax	1		0	20%	capital gains	0.7	
Standards development levy	2		0	0.5%	gross salaries	0.6	
AIDS levy	0	paid jointly	0	3%	surcharge on corporate income tax	0.5	
Road tax	4		0	240	fixed fee	0.2	

Tax or mandatory contribution	Payments (number)	Notes on payments	Time (hours)	Statutory tax rate	Tax base	Total tax rate (% of profit)	Notes on total tax rate
Tax on check transactions (stamp duty)	1		0	USD 0.05	per check	0	
Tax on interest	0		0	15%	interest income	0	
Social tax on employee	0	paid jointly	0	3.5%	gross salaries with ceiling	0	
Fuel tax	1		0		included in fuel price	0	small amount
Value added tax (VAT)	12		68	15%	value added	0	not included
Totals	49.0		242.0			32.8

TRADING ACROSS BORDERS

In today's globalized world, making trade between economies easier is increasingly important for business. Excessive document requirements, burdensome customs procedures, inefficient port operations and inadequate infrastructure all lead to extra costs and delays for exporters and importers, stifling trade potential. Research shows that exporters in developing countries gain more from a 10% drop in their trading costs than from a similar reduction in the tariffs applied to their products in global markets.

What do the indicators cover?

Doing Business measures the time and cost (excluding tariffs and the time and cost for sea transport) associated with exporting and importing a standard shipment of goods by sea transport, and the number of documents necessary to complete the transaction. The indicators cover predefined stages such as documentation requirements and procedures at customs and other regulatory agencies as well as at the port. They also cover trade logistics, including the time and cost of inland transport to the largest business city. The ranking of economies on the ease of trading across borders is determined by sorting their distance to frontier scores for trading across borders. These scores are the simple average of the distance to frontier scores for each of the component indicators. To make the data comparable across economies, *Doing Business* uses several assumptions about the business and the traded goods.

The business:

- Is located in the economy's largest business city. For the 11 economies with a population of more than 100 million, data for a second city have been added.
- Is a private, limited liability company, domestically owned and does not operate with special export or import privileges.
- Conducts export and import activities, but does not have any special accreditation such as an authorized economic operator status.

WHAT THE TRADING ACROSS BORDERS

INDICATORS MEASURE

Documents required to export and import (number)

- Bank documents
- Customs clearance documents
- Port and terminal handling documents
- Transport documents

Time required to export and import (days)

- Obtaining, filling out and submitting all the documents
- Inland transport and handling
- Customs clearance and inspections
- Port and terminal handling
- Does not include sea transport time

Cost required to export and import (US\$ per container)

- All documentation
- Inland transport and handling
- Customs clearance and inspections
- Port and terminal handling
- Official costs only, no bribes

The traded product:

- Is not hazardous nor includes military items.
- Does not require refrigeration or any other special environment.
- Do not require any special phytosanitary or environmental safety standards other than accepted international standards.
- Is one of the economy's leading export or import products.
- Is transported in a dry-cargo, 20-foot full container load.

TRADING ACROSS BORDERS

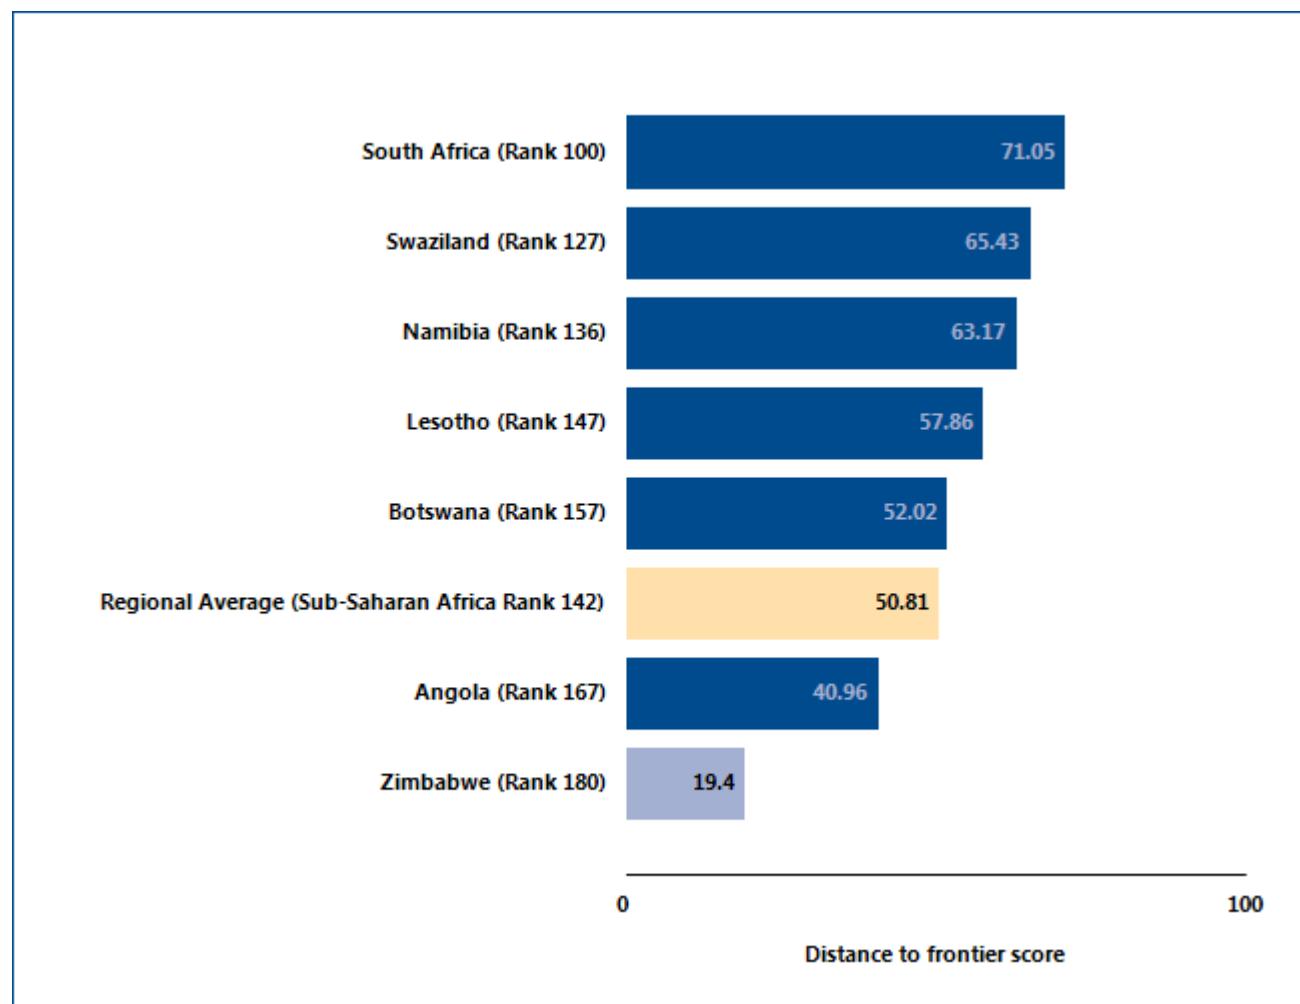

Where does the economy stand today?

What does it take to export or import in Zimbabwe? According to data collected by *Doing Business*, exporting a standard container of goods requires 7 documents, takes 53.0 days and costs \$4265.0. Importing the same container of goods requires 8 documents, takes 71.0 days and costs \$6160.0 (see the summary of four predefined stages and documents at the end of this chapter for details). Most indicator sets refer to a case scenario in the largest business city of an economy, except for 11 economies for which the data are a

population-weighted average of the 2 largest business cities. See the chapter on distance to frontier and ease of doing business ranking at the end of this profile for more details.

Globally, Zimbabwe stands at 180 in the ranking of 189 economies on the ease of trading across borders (figure 9.1). The rankings for comparator economies and the regional average ranking provide other useful information for assessing how easy it is for a business in Zimbabwe to export and import goods.

Figure 9.1 How Zimbabwe and comparator economies rank on the ease of trading across borders

Source: *Doing Business* database.

TRADING ACROSS BORDERS

What are the details?

The indicators reported here for Zimbabwe are based on a set of specific predefined stages for trading a standard shipment of goods by ocean transport (see the section in this chapter on what the indicators cover). Information on the required documents and the time and cost to complete export and import is collected from local freight forwarders, shipping lines, customs brokers, port officials and banks.

LOCATION OF STANDARDIZED COMPANY

Port Name: Durban, South Africa

City: Harare

The predefined stages, and the associated time and cost, for exporting and importing a standard shipment of goods are listed in the summary below, along with the required documents.

Table 9.2 Summary of predefined stages and documents for trading across borders in Zimbabwe

Stages to export	Time (days)	Cost (US\$)
Customs clearance and inspections	4	180
Documents preparation	33	300
Inland transportation and handling	12	3,500
Ports and terminal handling	4	285
Totals	53	4,265

Stages to import	Time (days)	Cost (US\$)
Customs clearance and inspections	6	350
Documents preparation	42	360
Inland transportation and handling	14	5,000
Ports and terminal handling	9	450
Totals	71	6,160

Documents to export
Bill of Lading
Commercial invoice
Customs export declaration (Form 21)
Exchange Control CD1 forms
Packing list
Pre-shipment inspection clean report of findings
Transit entry documents (South Africa's Form SAD500)

Documents to import
Bill of Lading
Cargo release order
Certificate of origin
Commercial invoice
Customs import declaration (Form 21)
Packing list
Road manifest
Transit entry documents (South Africa's Form SAD500)

ENFORCING CONTRACTS

Effective commercial dispute resolution has many benefits. Courts are essential for entrepreneurs because they interpret the rules of the market and protect economic rights. Efficient and transparent courts encourage new business relationships because businesses know they can rely on the courts if a new customer fails to pay. Speedy trials are essential for small enterprises, which may lack the resources to stay in business while awaiting the outcome of a long court dispute.

What do the indicators cover?

Doing Business measures the efficiency of the judicial system in resolving a commercial dispute before local courts. Following the step-by-step evolution of a standardized case study, it collects data relating to the time, cost and procedural complexity of resolving a commercial lawsuit. The ranking on the ease of enforcing contracts is the simple average of the percentile rankings on its component indicators: procedures, time and cost.

The dispute in the case study involves the breach of a sales contract between 2 domestic businesses. The case study assumes that the court hears an expert on the quality of the goods in dispute. This distinguishes the case from simple debt enforcement. To make the data comparable across economies, *Doing Business* uses several assumptions about the case:

- The seller and buyer are located in the economy's largest business city. For the 11 economies with a population of more than 100 million, data for a second city have been added.
 - The buyer orders custom-made goods, then fails to pay.
 - The seller sues the buyer before a competent court.
 - The value of the claim is 200% of the income per capita or the equivalent in local currency of USD 5,000, whichever is greater.
- | WHAT THE ENFORCING CONTRACTS INDICATORS MEASURE |
|--|
| Procedures to enforce a contract through the courts (number) |
| Steps to file and serve the case
Steps for trial and judgment
Steps to enforce the judgment |
| Time required to complete procedures (calendar days) |
| Time to file and serve the case
Time for trial and obtaining judgment
Time to enforce the judgment |
| Cost required to complete procedures (% of claim) |
| Average attorney fees
Court costs
Enforcement costs |
- The seller requests a pretrial attachment to secure the claim.
 - The dispute on the quality of the goods requires an expert opinion.
 - The judge decides in favor of the seller; there is no appeal.
 - The seller enforces the judgment through a public sale of the buyer's movable assets.

ENFORCING CONTRACTS

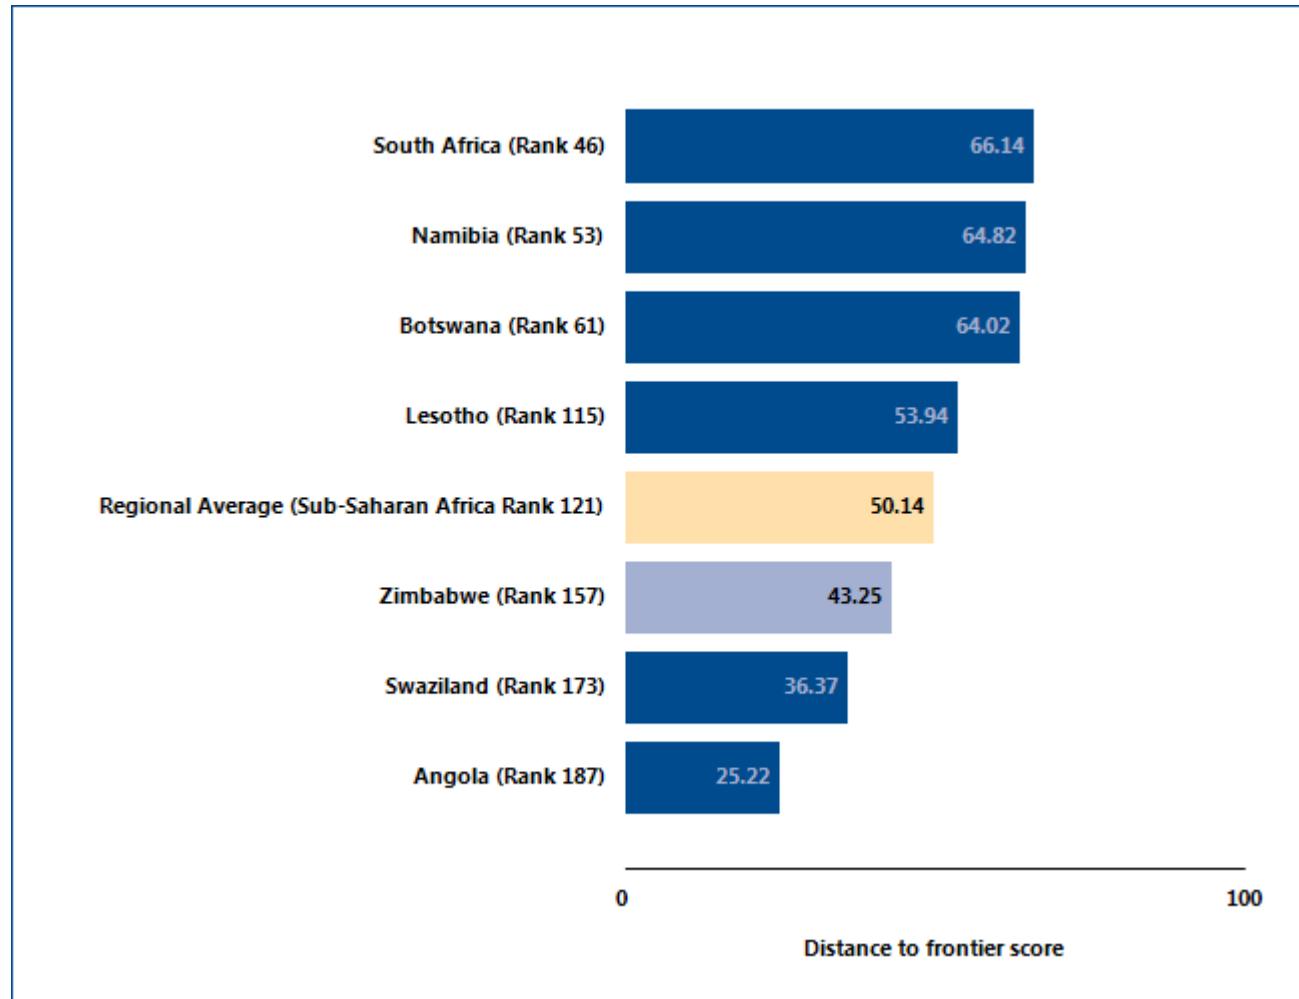

Where does the economy stand today?

How efficient is the process of resolving a commercial dispute through the courts in Zimbabwe? According to data collected by *Doing Business*, contract enforcement takes 410.0 days, costs 83.1% of the value of the claim and requires 38.0 procedures (see the summary at the end of this chapter for details). Most indicator sets refer to a case scenario in the largest business city of an economy, except for 11 economies for which the data are a population-weighted average of the 2 largest

business cities. See the chapter on distance to frontier and ease of doing business ranking at the end of this profile for more details.

Globally, Zimbabwe stands at 157 in the ranking of 189 economies on the ease of enforcing contracts (figure 10.1). The rankings for comparator economies and the regional average ranking provide other useful benchmarks for assessing the efficiency of contract enforcement in Zimbabwe.

Figure 10.1 How Zimbabwe and comparator economies rank on the ease of enforcing contracts

Source: *Doing Business* database.

ENFORCING CONTRACTS

What are the details?

The indicators reported here for Zimbabwe are based on a set of specific procedural steps required to resolve a standardized commercial dispute through the courts (see the section in this chapter on what the indicators cover). These procedures, and the time and cost of completing them, are identified through study of the codes of civil procedure and other court regulations, as well as through questionnaires completed by local litigation lawyers (and, in a quarter of the economies covered by *Doing Business*, by judges as well).

COURT NAME	
Claim value:	USD 5,478
Court name:	Harare Magistrates Court
City:	Harare

Table 10.2 Summary of time, cost and procedures for enforcing a contract in Zimbabwe

Indicator	Zimbabwe	Sub-Saharan Africa average
Time (days)	410	650
Filing and service	14	
Trial and judgment	247	
Enforcement of judgment	149	
Cost (% of claim)	83.1	45.1
Attorney cost (% of claim)	70.0	
Court cost (% of claim)	8.0	
Enforcement Cost (% of claim)	5.1	
Procedures (number)	38	39
Number of procedures (without bonus points)	38	
Total number of procedures (including bonus points)	38	

No.	Procedures
	Filing and service:
*	Plaintiff files a summons and complaint: Plaintiff files a summons and complaint with the court (orally or in writing).
*	Plaintiff pays court fees: Plaintiff pays court fees (e.g. court duties, stamp duties, or any other type of court fees). Answer 'yes' even if Plaintiff recovers these costs.
1	Registration of court case: Registration of court case by the court administration (this can include assigning a reference number to the case).
*	Assignment of court case to a judge: Assignment of court case to a judge (through a random procedure, automated system, ruling of an administrative judge, court officer, etc).
2	Plaintiff requests service of process on Defendant: Plaintiff requests in writing to the court for an order that process be served on Defendant.
3	Court order for service: Upon Plaintiff's request, judge orders process be served on Defendant.
4	Delivery of summons and complaint to person authorized to perform service of process on Defendant: The judge or a court officer delivers the summons to a summoning office, officer, or authorized person (including Plaintiff), for service of process on Defendant.
5	Attempt at physical delivery: An attempt to physically deliver summons and complaint to Defendant is made.
*	Proof of service: Plaintiff submits proof of service to court, as required by law or standard practice.
*	Application for pre-judgment attachment: Plaintiff submits an application in writing for the attachment of Defendant's property prior to judgment.
*	Decision on pre-judgment attachment: Judge decides whether to grant Plaintiff's request for pre-judgment attachment of Defendant's property and notifies Plaintiff and Defendant of the decision.
6	Pre-judgment attachment order: Defendant's property is attached prior to judgment. Attachment order either involves physical attachment, or is achieved by freezing, registering, marking, or otherwise separating and restricting Defendant's movement of specific moveable assets.
	Trial and judgment:
7	Defendant files an answer to Plaintiff's claim: Defendant files a written pleading which includes his answer or defense on the merits of the case (see assumption 4).
8	Plaintiff's written reply to Defendant's answer: Plaintiff responds to Defendant's answer with a written pleading, which may or may not include witness statements or expert (witness) statements.
9	Filing of written submissions: Plaintiff and Defendant file written pleadings and submissions with the court and transmit copies of the written pleadings or submissions to one another. The pleadings may or may not include witness statements or expert (witness) statements.
10	Adjournments: Court procedure is delayed because one or both parties request and obtain an adjournment to submit written pleadings. Check as 'yes' if this commonly happens.

No.	Procedures
11	Framing of issues: Plaintiff and Defendant assist the court in framing issues on which evidence is to be presented.
12	Pre-trial conference on procedure: The judge meets with the parties to discuss procedural issues (for example which applications and motions parties intend to file, which documents parties intend to rely on, etc.).
*	Setting of date for mediation hearing: The judge sets a date for a mediation hearing, sometimes also called a 'pre-trial conference,' and notifies the parties of the hearing date.
13	Mediation hearing: The judge, during this informal meeting with the parties, encourages them to settle the case (acting as mediator). The case cannot be settled, the judge may draft a pre-trial conference report, after which the case may be allocated to another judge for trial.
*	Request for interlocutory order: Defendant raises preliminary issues, such as jurisdiction, statute of limitation, etc. Checked as 'yes' if commonly raised by the Defendant as a matter of practice, regardless of justification.
*	Court's issuance of interlocutory order: Court decides the preliminary issues the Defendant raised by issuing an interlocutory order. Check as 'yes' if this is commonly the case in commercial cases.
*	Discovery requests: Plaintiff and Defendant make requests for the disclosure of documents, attempting to force the other party to reveal potentially detrimental documents. Check as 'yes' if discovery requests usually entail disputes.
14	Discovery disputes: Following a request for discovery of documentary evidence by one of the parties, the other party disputes the request and calls upon the judge to decide the issue. Check as 'yes' if discovery disputes are provided by law and commonly happen.
15	Request for oral hearing or trial: Plaintiff lists the case for trial on the court's calendar or applies for the date(s) for the oral hearing or trial.
*	Setting of date(s) for oral hearing or trial: Judge sets the date(s) for the oral hearing or trial.
16	Pre-trial conference aimed at preparing for trial: The judge meets with parties to make practical arrangements for the trial (for example, the number of witnesses parties intend to call on during trial, how much time each party is given to present oral arguments etc.).
17	Adjournments: Court proceedings are delayed because one or both parties request and obtain an adjournment to prepare for the oral hearing or trial as a matter of common practice.
18	Trial (prevalent in common law): The parties argue the merits of the case at (an) oral session(s) before the court. Witnesses and expert witnesses are questioned and cross-examined during trial.
19	Adjournments: Court proceedings are delayed because one or both parties request and obtain an adjournment during the oral hearing or trial, resulting in an additional or later trial or hearing date.
*	Final arguments: The parties present their final factual and legal arguments to the court either by oral presentation or by a written submission.
20	Judgment date: The judge sets a date for delivery of the judgment.
21	Notification of judgment in court: The parties are notified of the judgment at a court hearing.

No.	Procedures
22	Writing of judgment: The judge produces a written copy of the judgment.
23	Registration of judgment: The court office registers the judgment after receiving a written copy of the judgment.
24	Court notification of availability of the written judgment: The court notifies the parties that the written judgment is available at the courthouse.
25	Plaintiff receives a copy of the judgment: Plaintiff receives a copy of the written judgment which is 100% in favor of Plaintiff (see assumption 6).
26	Defendant is formally notified of the judgment: Plaintiff or court formally notifies the Defendant of the judgment. The appeal period starts to run from the day the Defendant is formally notified of the judgment.
27	Appeal period: By law Defendant has the opportunity to appeal the judgment during a specified period. Defendant decides not to appeal. Seller decides to start enforcing the judgment when the appeal period ends (see assumption 8).
28	Order for reimbursement by Defendant of Plaintiff's court fees: The judgment orders Defendant to reimburse Plaintiff for the court fees Plaintiff has advanced, because Defendant has lost the case.
	Enforcement of judgment:
*	Plaintiff requests an enforcement order: Plaintiff applies to the court to obtain the enforcement order ('seal' on judgment).
29	Plaintiff advances enforcement fees: Plaintiff pays the fees related to the enforcement of the judgment.
30	Attachment of enforcement order to judgment: The judge attaches the enforcement order ('seal') to the judgment.
*	Delivery of enforcement order: The court's enforcement order is delivered to a court enforcement officer or a private bailiff.
31	Identification of Defendant's assets by court official or Defendant for purposes of enforcement: The judge, a court enforcement officer, a private bailiff or the Defendant himself identifies Defendant's movable assets for the purposes of enforcing the judgment through a sale of Defendant's assets.
32	Attachment: Defendant's movable goods are attached (physically or by registering, marking or separating assets).
33	Report on execution of attachment: A court enforcement officer or private bailiff delivers a report on the attachment of Defendant's movable goods to the judge.
34	Call for public auction: Judge calls a public auction by, for example, advertising or publication in the newspapers.
35	Sale through public auction: The Defendant's movable property is sold at public auction.
36	Distribution of proceeds: The proceeds of the public auction are distributed to Plaintiff (and, where applicable, to other creditors, according to the rules of priority).
37	Reimbursement of Plaintiff's enforcement fees: Defendant reimburses Plaintiff's enforcement fees which Plaintiff had advanced previously.

No.	Procedures
38	Payment: Court orders that the proceeds of the public auction or the direct sale be delivered to Plaintiff.

* Not counted in the total number of procedures.

Source: *Doing Business* database.

RESOLVING INSOLVENCY

A robust bankruptcy system functions as a filter, ensuring the survival of economically efficient companies and reallocating the resources of inefficient ones. Fast and cheap insolvency proceedings result in the speedy return of businesses to normal operation and increase returns to creditors. By improving the expectations of creditors and debtors about the outcome of insolvency proceedings, well-functioning insolvency systems can facilitate access to finance, save more viable businesses and thereby improve growth and sustainability in the economy overall.

What do the indicators cover?

Doing Business studies the time, cost and outcome of insolvency proceedings involving domestic legal entities. These variables are used to calculate the recovery rate, which is recorded as cents on the dollar recouped by secured creditors through reorganization, liquidation or debt enforcement (foreclosure) proceedings. To determine the present value of the amount recovered by creditors, *Doing Business* uses the lending rates from the International Monetary Fund, supplemented with data from central banks and the Economist Intelligence Unit.

In addition, *Doing Business* evaluates the adequacy and integrity of the existing legal framework applicable to liquidation and reorganization proceedings through the strength of insolvency framework index. The index tests whether economies adopted internationally accepted good practices in four areas: commencement of proceedings, management of debtor's assets, reorganization proceedings and creditor participation.

The ranking of the Resolving Insolvency indicator is based on the recovery rate and the total score of the strength of insolvency framework index. The Resolving Insolvency indicator does not measure insolvency proceedings of individuals and financial institutions. The data are derived from survey responses by local insolvency practitioners and verified through a study of laws and regulations as well as public information on bankruptcy systems.

WHAT THE RESOLVING INSOLVENCY INDICATORS MEASURE

Time required to recover debt (years)

Measured in calendar years

Appeals and requests for extension are included

Cost required to recover debt (% of debtor's estate)

Measured as percentage of estate value

Court fees

Fees of insolvency administrators

Lawyers' fees

Assessors' and auctioneers' fees

Other related fees

Outcome

Whether business continues operating as a going concern or business assets are sold piecemeal

Recovery rate for creditors

Measures the cents on the dollar recovered by secured creditors

Outcome for the business (survival or not) determines the maximum value that can be recovered

Official costs of the insolvency proceedings are deducted

Depreciation of furniture is taken into account

Present value of debt recovered

Strength of insolvency framework index (0-16)

Sum of the scores of four component indices:

Commencement of proceedings index (0-3)

Management of debtor's assets index (0-6)

Reorganization proceedings index (0-3)

Creditor participation index (0-4)

RESOLVING INSOLVENCY

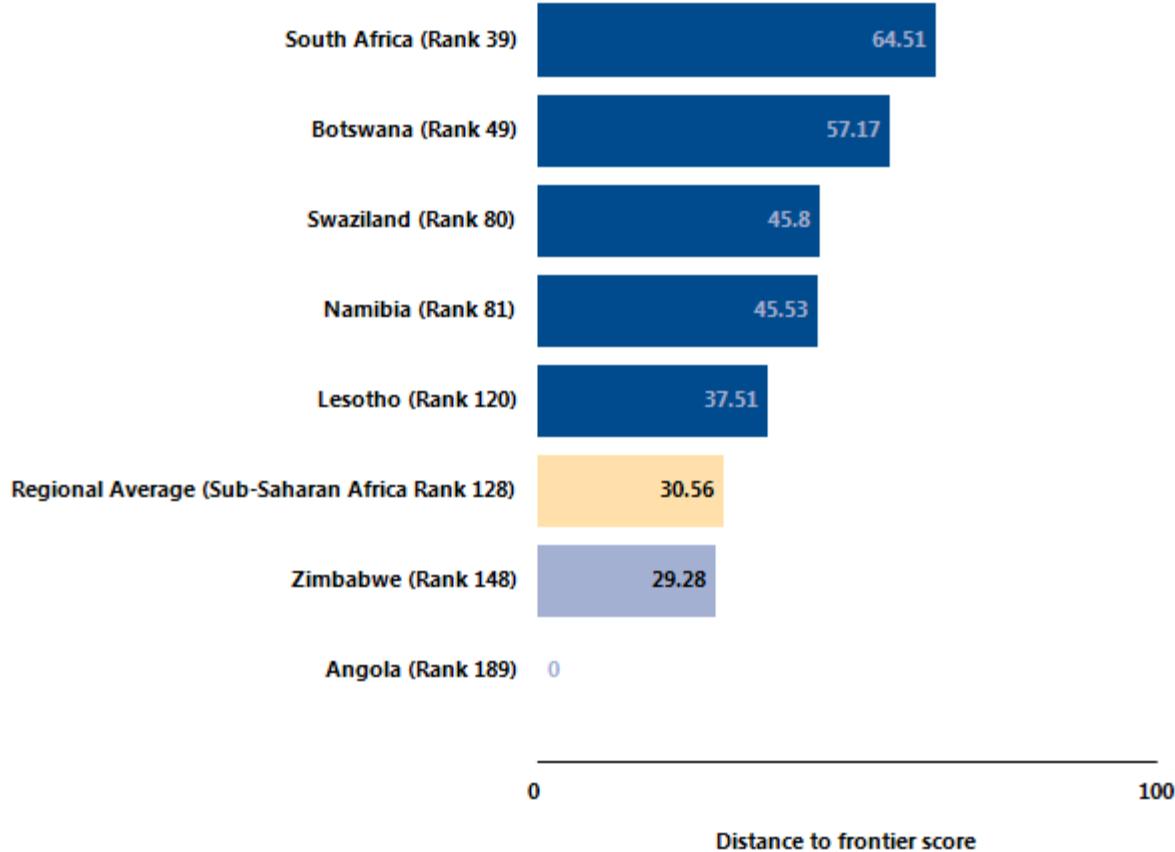

Where does the economy stand today?

Combination of quality regulations and efficient practice characterize the top-performing economies. How efficient are insolvency proceedings in Zimbabwe? According to data collected by *Doing Business*, resolving insolvency takes 3.3 years on average and costs 22.0% of the debtor's estate, with the most likely outcome being that the company will be sold as piecemeal sale. The average recovery rate is 13.8 cents on the dollar. Most indicator sets refer to a case scenario in the largest business city of an economy, except for 11 economies for which the data are a population-weighted average of the 2 largest business cities. See the chapter on distance to frontier and ease of doing business ranking at the end of this profile for more details.

According to data collected by *Doing Business*, Zimbabwe scores 3.0 out of 3 points on the commencement of proceedings index, 2.0 out of 6 points on the management of debtor's assets index, 0.0 out of 3 points on the reorganization proceedings index, and 2.0 out of 4 points on the creditor participation index. Zimbabwe's total score on the strength of insolvency framework index is 7.0 out of 16.

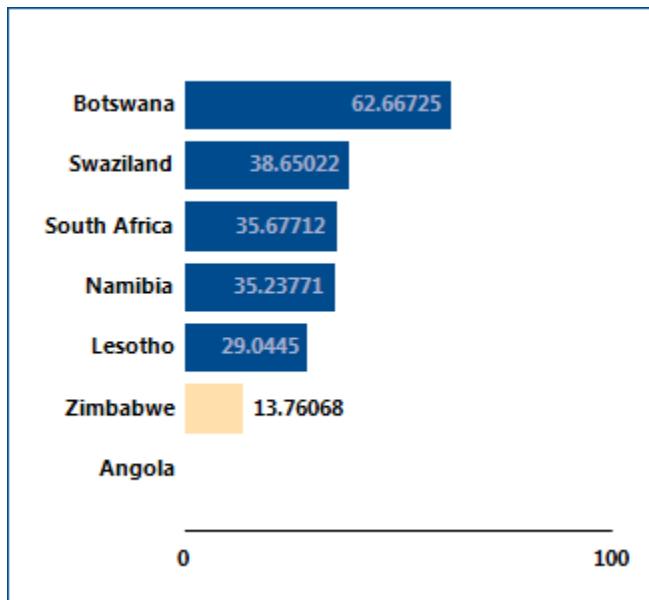

Globally, Zimbabwe stands at 148 in the ranking of 189 economies on the ease of resolving insolvency (figure 11.1). The rankings for comparator economies and the regional average ranking provide other useful benchmarks for assessing the efficiency of insolvency proceedings in Zimbabwe.

LABOR MARKET REGULATION

Doing Business measures flexibility in the regulation of employment, specifically as it affects the hiring and redundancy of workers and the rigidity of working hours. This year, for the first time, the indicators measuring flexibility in labor market regulations focus on those affecting the food retail industry, using a standardized case study of a cashier in a supermarket. Also new is that *Doing Business* collects data on regulations applying to employees hired through temporary-work agencies as well as on those applying to permanent employees or employees hired on fixed-term contracts. The indicators also cover additional areas of labor market regulation, including social protection schemes and benefits as well as labor disputes.

Over the period from 2007 to 2011 improvements were made to align the methodology for the labor market regulation indicators (formerly the employing workers indicators) with the letter and spirit of the International Labour Organization (ILO) conventions. Only 6 of the 188 ILO conventions cover areas measured by *Doing Business*: employee termination, weekend work, holiday with pay, night work, protection against unemployment and medical care and sickness benefits. The *Doing Business* methodology is fully consistent with these 6 conventions. The ILO conventions covering areas related to the labor market regulation indicators do not include the ILO core labor standards—8 conventions covering the right to collective bargaining, the elimination of forced labor, the abolition of child labor and equitable treatment in employment practices.

Between 2009 and 2011 the World Bank Group worked with a consultative group—including labor lawyers, employer and employee representatives, and experts from the ILO, the Organisation for Economic Co-operation and Development (OECD), civil society and the private sector—to review the methodology for the labor market regulation indicators and explore future areas of research.

A full report with the conclusions of the consultative group is available at:
<http://www.doingbusiness.org/methodology/employing-workers>.

Doing Business 2015 presents the data for the labor market regulation indicators in an annex. The report does not present rankings of economies on these indicators nor include the topic in the aggregate distance to frontier score or ranking on the ease of doing business. Detailed data collected on labor market regulations are available on the *Doing Business* website (<http://www.doingbusiness.org>). The data on labor market regulations are based on a detailed survey of employment regulations that is completed by local lawyers and public officials. Employment laws and regulations as well as secondary sources are reviewed to ensure accuracy. To make the data comparable across economies, several assumptions about the worker and the business are used.

The worker:

- Is a cashier in a supermarket or a grocery store
- Is a full-time employee
- Is not a member of the labor union, unless membership is mandatory

The business:

- Is a limited liability company (or the equivalent in the economy) with 60 employees.
- Operates a supermarket or grocery store in the economy's largest business city. For 11 economies the data are also collected for the second largest business city.
- Is subject to collective bargaining agreements if such agreements cover more than 50% of the food retail sector and they apply even to firms that are not party to them.
- Abides by every law and regulation but does not grant workers more benefits than those mandated by law, regulation or (if applicable) collective bargaining agreements.

LABOR MARKET REGULATION

Employment laws are needed to protect workers from arbitrary or unfair treatment and to ensure efficient contracting between employers and workers. Many economies that changed their labor market regulation in

the past 5 years did so in ways that increased labor market flexibility. What changes did Zimbabwe adopt that affected the *Doing Business* indicators on labor market regulation (table 12.1)?

Table 12.1 What changes did Zimbabwe make in terms of labor market regulation?

DB year	Reform
DB2011	Zimbabwe reduced the severance payment obligation applicable in case of redundancy dismissals.

LABOR MARKET REGULATION

What are the details?

The data reported here for Zimbabwe are based on a detailed survey of labor market regulation that is completed by local lawyers and public officials.

Employment laws and regulations as well as secondary sources are reviewed to ensure accuracy.

Difficulty of hiring index

Difficulty of hiring covers 4 areas: (i) whether fixed-term contracts are prohibited for permanent tasks; (ii) the maximum cumulative duration of fixed-term contracts; (iii) the minimum wage for a cashier, age 19, with 1 year of work experience; and (iv) the ratio of the minimum

wage to the average value added per worker. The average value added per worker is the ratio of an economy's GNI per capita to the working-age population as a percentage of the total population.

Difficulty of hiring index	Data
Fixed-term contracts prohibited for permanent tasks?	No
Maximum length of a single fixed-term contract (months)	No limit
Maximum length of fixed-term contracts, including renewals (months)	No limit
Minimum wage applicable to the worker assumed in the case study (US\$/month)	255.49
Ratio of minimum wage to value added per worker	2.12

LABOR MARKET REGULATION

Rigidity of hours index

Rigidity of hours covers 7 areas: (i) whether the workweek can extend to 50 hours or more (including overtime) for 2 months in a year to respond to a seasonal increase in workload; (ii) the maximum number of days allowed in the workweek; (iii) the premium for night work (as a percentage of hourly pay); (iv) the

premium for work on a weekly rest day (as a percentage of hourly pay); (v) whether there are restrictions on night work; (vi) whether there are restrictions on weekly holiday work; and (vii) the average paid annual leave for workers with 1 year of tenure, 5 years of tenure and 10 years

of tenure.

Rigidity of hours index	Data
50-hour workweek allowed for 2 months a year in case of a seasonal increase in workload?	Yes
Maximum working days per week	6.0
Premium for night work (% of hourly pay)	0%
Premium for work on weekly rest day (% of hourly pay)	0%
Major restrictions on night work?	Yes
Major restrictions on weekly holiday?	No
Paid annual leave for a worker with 1 year of tenure (in working days)	22.0
Paid annual leave for a worker with 5 years of tenure (in working days)	22.0
Paid annual leave for a worker with 10 years of tenure (in working days)	22.0
Paid annual leave (average for workers with 1, 5 and 10 years of tenure, in working days)	22.0

LABOR MARKET REGULATION

Difficulty of redundancy index

Difficulty of redundancy index looks at 9 questions: (i) what the length is in months of the maximum probationary period; (ii) whether redundancy is disallowed as a basis for terminating workers; (iii) whether the employer needs to notify a third party (such as a government agency) to terminate 1 redundant worker; (iv) whether the employer needs to notify a third party to terminate a group of 9 redundant workers; (v)

whether the employer needs approval from a third party to terminate 1 redundant worker; (vi) whether the employer needs approval from a third party to terminate a group of 9 redundant workers; (vii) whether the law requires the employer to reassign or retrain a worker before making the worker redundant; (viii) whether priority rules apply for redundancies; and (ix) whether priority rules apply for reemployment.

Difficulty of redundancy index	Data
Maximum length of probationary period (months)	3.0
Dismissal due to redundancy allowed by law?	Yes
Third-party notification if 1 worker is dismissed?	Yes
Third-party approval if 1 worker is dismissed?	Yes
Third-party notification if 9 workers are dismissed?	Yes
Third-party approval if 9 workers are dismissed?	Yes
Retraining or reassignment obligation before redundancy?	Yes
Priority rules for redundancies?	No
Priority rules for reemployment?	No

LABOR MARKET REGULATION

Redundancy cost

Redundancy cost measures the cost of advance notice requirements, severance payments and penalties due when terminating a redundant worker, expressed in weeks of salary. The average value of notice

requirements and severance payments applicable to a worker with 1 year of tenure, a worker with 5 years and a worker with 10 years is considered. One month is recorded as 4 and 1/3 weeks.

Redundancy cost indicator (in salary weeks)	Data
Notice period for redundancy dismissal for a worker with 1 year of tenure	13.0
Notice period for redundancy dismissal for a worker with 5 years of tenure	13.0
Notice period for redundancy dismissal for a worker with 10 years of tenure	13.0
Notice period for redundancy dismissal (average for workers with 1, 5 and 10 years of tenure)	13.0
Severance pay for redundancy dismissal for a worker with 1 year of tenure	13.0
Severance pay for redundancy dismissal for a worker with 5 years of tenure	65.0
Severance pay for redundancy dismissal for a worker with 10 years of tenure	130.0
Severance pay for redundancy dismissal (average for workers with 1, 5 and 10 years of tenure)	69.3

Social protection schemes and benefits & Labor disputes

Doing Business collects data on the existence of unemployment protection schemes as well as data on whether employers are legally required to provide health insurance for employees with permanent contracts.

Doing Business also assesses the mechanisms available to resolve labor disputes. More specifically, it collects data on what courts would be competent to hear labor disputes and whether the competent court is specialized in resolving labor disputes.

Social protection schemes and benefits & Labor disputes indicator	Data
Availability of unemployment protection scheme?	No
Health insurance existing for permanent employees?	No
Availability of courts or court sections specializing in labor disputes?	Yes

DISTANCE TO FRONTIER AND EASE OF DOING BUSINESS RANKING

This year's report presents results for 2 aggregate measures: the distance to frontier score and the ease of doing business ranking, which for the first time this year is based on the distance to frontier score. The ease of doing business ranking compares economies with one another; the distance to frontier score benchmarks economies with respect to regulatory best practice, showing the absolute distance to the best performance on each *Doing Business* indicator. When compared across years, the distance to frontier score shows how much the regulatory environment for local entrepreneurs in an economy has changed over time in absolute terms, while the ease of doing business ranking can show only how much the regulatory environment has changed relative to that in other economies.

Distance to Frontier

The distance to frontier score captures the gap between an economy's performance and a measure of best practice across the entire sample of 31 indicators for 10 *Doing Business* topics (the labor market regulation indicators are excluded). For starting a business, for example, Canada and New Zealand have the smallest number of procedures required (1), and New Zealand the shortest time to fulfill them (0.5 days). Slovenia has the lowest cost (0.0), and Australia, Colombia and 110 other economies have no paid-in minimum capital requirement (table 15.1 in the *Doing Business 2015* report).

Calculation of the distance to frontier score

Calculating the distance to frontier score for each economy involves 2 main steps. First, individual component indicators are normalized to a common unit where each of the 31 component indicators y (except for the total tax rate) is rescaled using the linear transformation $(\text{worst} - y)/(\text{worst} - \text{frontier})$. In this formulation the frontier represents the best performance on the indicator across all economies since 2005 or the third year after data for the indicator were collected for the first time. For legal indicators such as those on getting credit or protecting minority investors, the frontier is set at the highest possible value. For the total tax rate, consistent with the use of a threshold in calculating the rankings on this indicator, the frontier is

defined as the total tax rate at the 15th percentile of the overall distribution for all years included in the analysis. For the time to pay taxes the frontier is defined as the lowest time recorded among all economies that levy the 3 major taxes: profit tax, labor taxes and mandatory contributions, and value added tax (VAT) or sales tax. In addition, the cost to export and cost to import for each year are divided by the GDP deflator, to take the general price level into account when benchmarking these absolute-cost indicators across economies with different inflation trends. The base year for the deflator is 2013 for all economies.

In the same formulation, to mitigate the effects of extreme outliers in the distributions of the rescaled data for most component indicators (very few economies need 700 days to complete the procedures to start a business, but many need 9 days), the worst performance is calculated after the removal of outliers. The definition of outliers is based on the distribution for each component indicator. To simplify the process, 2 rules were defined: the 95th percentile is used for the indicators with the most dispersed distributions (including time, cost, minimum capital and number of payments to pay taxes), and the 99th percentile is used for number of procedures and number of documents to trade. No outlier was removed for component indicators bound by definition or construction, including legal index scores (such as the depth of credit information index, extent of conflict of interest regulation index and strength of insolvency framework index) and the recovery rate (figure 15.1 in the *Doing Business 2015* report).

Second, for each economy the scores obtained for individual indicators are aggregated through simple averaging into one distance to frontier score, first for each topic and then across all 10 topics: starting a business, dealing with construction permits, getting electricity, registering property, getting credit, protecting minority investors, paying taxes, trading across borders, enforcing contracts and resolving insolvency. More complex aggregation methods—such as principal components and unobserved components—yield a ranking nearly identical to the simple average used by *Doing Business*⁶. Thus *Doing Business* uses the simplest

⁶ See Djankov, Manraj and others (2005). Principal components and unobserved components methods yield a ranking nearly identical to

method: weighting all topics equally and, within each topic, giving equal weight to each of the topic components⁷.

An economy's distance to frontier score is indicated on a scale from 0 to 100, where 0 represents the worst performance and 100 the frontier. All distance to frontier calculations are based on a maximum of 5 decimals. However, indicator ranking calculations and the ease of doing business ranking calculations are based on 2 decimals. The difference between an economy's distance to frontier score in any previous year and its score in 2014 illustrates the extent to which the economy has closed the gap to the regulatory frontier over time. And in any given year the score measures how far an economy is from the best performance at that time.

Treatment of the total tax rate

This year, for the first time, the total tax rate component of the paying taxes indicator set enters the distance to frontier calculation in a different way than any other indicator. The distance to frontier score obtained for the total tax rate is transformed in a nonlinear fashion before it enters the distance to frontier score for paying taxes. As a result of the nonlinear transformation, an increase in the total tax rate has a smaller impact on the distance to frontier score for the total tax rate—and therefore on the distance to frontier score for paying taxes—for economies with a below-average total tax rate than it would have in the calculation done in previous years (line B is smaller than line A in figure 15.2 of the *Doing Business 2015* report). And for economies with an extreme total tax rate (a rate that is very high relative to the average), an increase has a greater impact on both these distance to frontier scores than before (line D is bigger than line C in figure 15.2 of the *Doing Business 2015* report).

The nonlinear transformation is not based on any economic theory of an "optimal tax rate" that minimizes distortions or maximizes efficiency in an economy's

that from the simple average method because both these methods assign roughly equal weights to the topics, since the pairwise correlations among indicators do not differ much. An alternative to the simple average method is to give different weights to the topics, depending on which are considered of more or less importance in the context of a specific economy.

⁷ For getting credit, indicators are weighted proportionally, according to their contribution to the total score, with a weight of 60% assigned to the strength of legal rights index and 40% to the depth of credit information index. Indicators for all other topics are assigned equal weights

overall tax system. Instead, it is mainly empirical in nature. The nonlinear transformation along with the threshold reduces the bias in the indicator toward economies that do not need to levy significant taxes on companies like the *Doing Business* standardized case study company because they raise public revenue in other ways—for example, through taxes on foreign companies, through taxes on sectors other than manufacturing or from natural resources (all of which are outside the scope of the methodology). In addition, it acknowledges the need of economies to collect taxes from firms.

Calculation of scores for economies with 2 cities covered

For each of the 11 economies for which a second city was added in this year's report, the distance to frontier score is calculated as the population-weighted average of the distance to frontier scores for the 2 cities covered (table 12.1). This is done for the aggregate score, the scores for each topic and the scores for all the component indicators for each topic.

Table 12.1 Weights used in calculating the distance to frontier scores for economies with 2 cities covered

Economy	City	Weight (%)
Bangladesh	Dhaka	78
	Chittagong	22
Brazil	São Paulo	61
	Rio de Janeiro	39
China	Shanghai	55
	Beijing	45
India	Mumbai	47
	Delhi	53
Indonesia	Jakarta	78
	Surabaya	22
Japan	Tokyo	65
	Osaka	35
Mexico	Mexico City	83
	Monterrey	17
Nigeria	Lagos	77
	Kano	23
Pakistan	Karachi	65
	Lahore	35
Russian Federation	Moscow	70
	St. Petersburg	30
United States	New York	60
	Los Angeles	40

Economies that improved the most across 3 or more *Doing Business* topics in 2013/14

Doing Business 2015 uses a simple method to calculate which economies improved the ease of doing business the most. First, it selects the economies that in 2013/14 implemented regulatory reforms making it easier to do business in 3 or more of the 10 topics included in this year's aggregate distance to frontier score. Twenty-one economies meet this criterion: Azerbaijan; Benin; the Democratic Republic of Congo; Côte d'Ivoire; the Czech Republic; Greece; India; Ireland; Kazakhstan; Lithuania; the former Yugoslav Republic of Macedonia; Poland; Senegal; the Seychelles; Spain; Switzerland; Taiwan, China; Tajikistan; Togo; Trinidad and Tobago; and the United Arab Emirates. Second, *Doing Business* sorts these economies on the increase in their distance to frontier score from the previous year using comparable data.

Selecting the economies that implemented regulatory reforms in at least 3 topics and had the biggest improvements in their distance to frontier scores is intended to highlight economies with ongoing, broad-based reform programs. The improvement in the distance to frontier score is used to identify the top improvers because this allows a focus on the absolute improvement—in contrast with the relative improvement shown by a change in rankings—that economies have made in their regulatory environment for business.

Ease of *Doing Business* ranking

The ease of doing business ranking ranges from 1 to 189. The ranking of economies is determined by sorting the aggregate distance to frontier scores, rounded to 2 decimals.
